INSTRUMENTACIÓN CIENTÍFICO TÉCNICA

THE *Clifton* RANGE

NICKEL-ELECTRO Ltd.

Welcome to the *Clifton* range from Nickel-Electro

Nickel-Electro is a wholly independent, family owned company, based in the South West of England. We design and manufacture the well known Clifton Range of temperature control equipment and instrumentation, which includes unstirred, stirred, shaking baths, digital hotplates and the innovative Duobaths. Trading since 1941, continued investment and development has established Nickel-Electro as a leading manufacturer of laboratory instrumentation.

Our extensive design and production facilities feature state of the art 3D design, computerised punching and forming, powder painting and electrical and electronic assembly all fully supported by an integrated ERP manufacturing system, managing and coordinating the business within an ISO9001 environment. The complete manufacturing solution on one site, controlling the entire production process, a guarantee of quality.

Recognised as an 'Investor in People' our staff offer you high levels of skill and experience, having many years of service in the business. We believe in combining cutting edge technology with traditional skills and values and take pride in being a high quality precision UK manufacturer.

In addition Nickel-Electro manufactures a comprehensive range of laboratory consumables in a variety of materials including aluminium, stainless steel, nickel and zirconium. This complements the Clifton Range and provides our customers with a single source of many types of laboratory equipment.

BLOCKHEATER HOTPLATES

BH-DIG series, Digibloc

Digibloc provides a safe, dry and consistent method of heating using accessory aluminium heating blocks with excellent thermal conductivity. The accurate PID controller has the facility to retain a user adjustable, independent time and temperature combination making it ideally suited for a variety of purposes including heating tubes, micro tubes or vials, which demand repeatability.

The unit consists of a low profile durable corrosion resistant stainless steel case with chemical resistant wipe clean sloping control panel with touch buttons to enter temperature and time values. Indicators show heating, alarm, time and set point modes in use. Supplied with Bloc extraction tool. The accessory probe overrides the internal sensor allowing direct measurement and control of Blocs.

Features Include:

- * Sensitivity: $\pm 0.1^{\circ}\text{C}$ @ 60°C .
- * Uniformity: $\pm 0.1^{\circ}\text{C}$ @ 60°C .
- * Temperature range: ambient + 5°C - 150°C .
- * Clearly visible LED display suiting all lighting conditions
 - time or temperature display.
 - menu driven data entry.

- temperature display to 0.1° resolution up to 99°C .
- indicators heating, alarm, time and set point.
- * Precision control
 - In normal use 'Adaptive PID'.
 - Changeable conditions or liquids
- * Auto setting Under and Over temperature alarm.
- * Time and temperature settings retained after power off.
- * Control options
 - temperature control only.
 - process - temperature and time
- * Factory pre-set two point calibration completed.

Factory pre-set two point calibration on every unit.

- * Chemical resistant controls
 - splash proof, wipe clean .
- * Wide choice of accessory Blocs suiting
 - micro tubes, tubes and vials. ★
- * Accepts external accessory probe
 - in block temperature control. ★

Cat No.	BH-1/DI G
Temperature	
Display/resolution	0.1°C
Range	ambient + 5°C - 150°C
Sensitivity	$\pm 0.1^{\circ}\text{C}$ @ 60°C
Uniformity well to well	$\pm 0.1^{\circ}\text{C}$ @ 60°C
Over temp. alarm	+ 4°C with heater cut-off, indication
Timer	
Display/resolution	1 minute
Settings	variable, 00hrs.01mins - 99hrs.59mins
Time cycle	activated @ set point 2
Cycle end	audible buzzer and "end" message
General	
Heater, Watts	250W
Well dims	140w x 50d x 72h mm
Well capacity	1 or 2 ■
Overall, dims	200w x 295d x 85h mm
Voltage	100 - 230V

1. Two Blocs can be fitted in the Heating well. ■
2. Wide range of Accessory Blocks, Lid and Probe available - see accessories page 5 ★
3. BH-1/DIG is dual point calibrated at Factory.

BH-T series, Thermubloc

The Thermubloc is a thermostatically controlled analogue block heater being easy to use and cost effective.

Features Include:

- * Sensitivity: $\pm 0.5^{\circ}\text{C}$ @ 60°C
- * Uniformity: $\pm 0.5^{\circ}\text{C}$ @ 60°C
- * Temperature range: ambient $+5^{\circ}\text{C}$ - 120°C
- * Easy to use

Cat No.	BH-1T
Temperature	
Display/resolution	analogue
Range	ambient $+5^{\circ}\text{C}$ - 120°C
Sensitivity	$\pm 0.5^{\circ}\text{C}$ @ 60°C
Uniformity well to well	$\pm 0.5^{\circ}\text{C}$ @ 60°C
General	
Heater, Watts	250W
Well dims	140w x 50d x 72h mm
Well capacity	1 or 2
Overall, dims	200w x 295d x 85h mm
Voltage	100 - 230V

- Two Blocs can be fitted in the Heating well. ■
- BH-1/DIG is dual point calibrated at Factory.
- Painted body features Anti-bacterial protection, a hygienic coating which inhibits bacterial growth.

ACCESSORIES Blocs

H I G H T P L A T E S

HP1D series, Digital Hotplates

These digital hotplates feature a precision PID controller providing degree by degree temperature setting and control, with refined hotplate sensitivity.

Temperature and time settings are retained in memory, even after power off.

Featuring a hob surface which overlaps the body to ensure that no spillages enter the controls.

The hob is solid aluminium, 12mm thick for excellent thermal properties and even heat distribution over its working area.

Factory pre-set two point calibration on every unit.

Auto set temperature alarms

Features Include:

- * Sensitivity $\pm 0.5^{\circ}\text{C}$ @ 60°C .
- * Uniformity $\pm 0.5^{\circ}\text{C}$ @ 60°C .
- * Clear 3 digit display: 1°C resolution.
- * Auto setting Over temperature alarm.
- * Variable Timer
 - 00hrs.01mins - 99hrs.59mins
 - activated once set point is reached
 - audible buzzer and end message
- * Precision control
 - In normal use 'Adaptive PID'
 - Changeable conditions or liquids
- * Durable
 - Bath body zinc coated steel, for corrosion protection, powder coated exterior with a chemical resistant anti-bacterial paint.
 - Chemical resistant*, anti-bacterial splash proof controls.

Cat. No.	HP1-1D	HP1-2D
Hotplate dims	305w x 240d mm	457w x 305d mm
Temperature settings	ambient + 10°C to 350°C	
Temperature control	Digital, PID, PT100	
Over temp. alarm	+ 10°C , warning message, heater cut off, indicator	
Retort points	1	2
Overall, dims	305w x 240d x 200h mm	457w x 305d x 200h mm
Heater, Watts	1000W	2000W
Voltage	230V	

1. HP-D Hotplates are dual point calibrated at Factory.
2. Painted body and splash proof controls features Anti-bacterial protection, a hygienic coating which actively inhibits bacterial growth.
3. Control panel has good general chemical and detergent resistance.
4. A larger size Digital Hotplate is available HP1-3D - based on unit sizes detailed HP1-3 Analogue Hotplates.

BATH ARMOR™

FULL METAL

Then use Bath Armor

Moisture and Gas impermeable

Smooth, rounded & fluid-like

High thermal conductivity

Reduces water consumption

Water baths

- * No more filling.
- * No more routine cleaning.
- * No water borne contamination.
- * No longer incubating microbes.
- * Washes and sterilizes easily.
- * Good thermal heat distribution.

Replace water in your water bath with these thermally efficient pellets that are easy to keep clean. It enables you to eliminate nearly all water bath cleaning and protects your water bath from drying out.

Saving need for racks, floaties and bottle weights. More free time, one less lab duty, never have to wash or refill a water bath again.

Blockheaters

- * One pile suits all tube sizes.
- * Replaces pre-drilled blocks.
- * More convenient to use.
- * Thermally efficient.
- * Accepts any size and shape vessels.
- * Washes and sterilizes easily.

Replaces pre-drilled blocks in your blockheaters with thermally efficient pellets that are easy to keep clean.

Reduces investment in blocks and heating well can be used for heating any tube size or shape at the same time.

ANALOGUE HOTPLATES

HP1 series, Analogue Hotplates

These analogue hotplates feature a generous working area.

Thermostatically controlled, with an illuminated on/off switch and heater indicator.

Featuring a heating surface which overlaps the body to ensure that no spillages enter the controls. This surface is a substantial solid aluminium plate providing excellent thermal properties with even temperature distribution over its working area.

All these hotplates accept standard laboratory retort rods enabling scaffolding to be constructed.

These hotplates are constructed from durable zinc coated steel with chemical resistant anti-bacterial paint finish.

Cat. No.	HP1-1	HP1-2
Hotplate dims	305w x 240d mm	457w x 305d mm
Max. surface temp.	350°C	350°C
Temperature control	Analogue, thermostatic	Analogue, thermostatic
Retort points	1	2
Overall, dims	305w x 240d x 200h mm	457w x 305d x 200h mm
Heater, Watts	1000W	2000W
Voltage	230V	230V

1. A range of accessories are available - see accessories page 7.

2. Painted body and control panel features anti-bacterial protection, a hygienic coating which actively inhibits bacterial growth.

Features Include:

- * Sensitivity $\pm 10^{\circ}\text{C}$ @ 150°C .
- * HOT warning indicator - above 60°C .
- * Temperature range: ambient $+5^{\circ}\text{C}$ - 350°C .
- * "Heater ON" and "Mains supply ON" indicator.
- * Solid aluminium top plate with excellent thermal properties.
- * Hob overlaps the controls ensuring spillage's do not ingress into controls.
- * Easily converted into a sand bath with accessory kit. Sand bath provides even heating for a vessels or containers, for chemical reactions.

COOLED INCUBATORS

NE7 series, Cooled Incubators

This series of Clifton Cooled Incubators feature precision time and temperature control with programming options from 0°C to 70°C. Microprocessor control with auto diagnostics, digital LCD display to 0.1°C resolution, three program memory with event log of actual temperature and time data with RS232 interface. Calibrated at 37°C with certificate.

It can provide heating or cooling cycles or produce a controlled environment above or below ambient. Featuring forced air circulation with Fan speed regulation from 0 to 100%.

Featuring wipe clean touch pad controls illuminated LCD display for viewing wide range of settings, programs, temperature and time values.

The high grade 304 spec stainless steel chamber is sealed shut with a solid door. Other door options available include a window in the door or an internal glass door allowing the observation the chamber with no temperature disturbance.

The Cooled range can be specified with accessory "Photoperiodic System" lighting elements. This makes the Incubator suitable for plant growth, micro organisms, fungi, etc. A wide range of light sources, light colour and illumination intensity can be installed in the chamber.

- Sensitivity measurements based on temperature readings on shelf in centre of the chamber.
- Working capacity of chamber can be smaller.
- Temperature range can be extended to -10°C as an accessory item, factory configurable.
- Before ordering please check the room or building access where this Incubator will be installed and electrical power requirements.
- Uniformity measured in vertical axis in the chamber using Wired Shelves.
- Incubator constructed from powder coated stainless steel.

Features Include:

- * Temperature
 - range: 0°C to 70°C (-10°C to 70°C)³
 - dual pt100 temperature probes ¹¹
- * Temperature and time programmable
 - operate with six segment temperature-time profile with delay ON¹³, heating up⁹, hold at set point and cooling down - settable 1 minute to 99 hours ¹²
 - or use in continuous mode at set point with either delay start¹³ or timed up to 999 hours ¹²
 - date and time setting, program start unsupervised ¹³
 - audible alarm and display, setting 0.5°C to 5.0°C about set point ¹⁰
 - fast temperature rise to attain set point or normal for no overshoot ⁹
- * Over-temperature protection
 - class 1, thermal cut out +80°C and separate element overheat protection ⁷
 - class 2, experiment/sample protection, adjustable setting above set point, heating and cooling switched off, audible and visual indication ⁸
 - temperature sensor fail alarm ¹¹

GD-112	Additional interior glass door, for 112 litre incubators
GD-240	Additional interior glass door, for 240 litre incubators
GD-400	Additional interior glass door, for 400 litre incubators
GD-750	Additional interior glass door, for 750 litre incubators

DOOR WITH VIEWING WINDOW

Cat No.	Description
W-56	Door with viewing window, for 56 litre incubators
W-112	Door with viewing window, for 112 litre incubators
W-240	Door with viewing window, for 240 litre incubators
W-400	Door with viewing window, for 400 litre incubators
W-750	Door with viewing window, for 750 litre incubators

WIRE SHELVES

Cat No.	Description
WS-56	Wire shelf, max 10 kg load, for 56 litre incubators
WS-112	Wire shelf, max 10 kg load, for 112 litre incubators
WS-240	Wire shelf, max 10 kg load, for 240 litre incubators
WS-400	Wire shelf, max 10 kg load, for 400 litre incubators
WS-750	Wire shelf, max 10 kg load, for 750 litre incubators

PERFORATED SHELVES

Cat No.	Description
SP-56	Perforated shelf, max 10 kg load, for 56 litre incubators
SP-112	Perforated shelf, max 10 kg load, for 112 litre incubators
SP-240	Perforated shelf, max 10 kg load, for 240 litre incubators
SP-400	Perforated shelf, max 10 kg load, for 400 litre incubators
SP-750	Perforated shelf, max 10 kg load, for 750 litre incubators

TEST TUBE RACKS

6870	Test tube rack, stainless steel, 26 holes x 17mm dia.
6871	Test tube rack, stainless steel, 16 holes x 26mm dia.
6872	Test tube rack, stainless steel, 36 holes x 13mm dia.
6873	Test tube rack, stainless steel, 18 holes x 19mm dia.
6900	Test tube rack, stainless steel, 12 holes x 32mm dia.

Overall dimensions of rack: 270mm long x 70mm wide, height to top of lifting handle: 138mm

LAB ARMOR

BA-0.5	Bath Armor pack 0.5 Litre
WA-0	Walkabout Insulative Scoop Tray
BUCB-1	Chill Bucket with Beads, bag and Chilli Packs

MISCELLANEOUS

Cat No.	Description
IS-1	Internal power socket
OT-3.1	Over-temperature protection 3.1
OT-3.2	Under-temperature protection 3.2
OT-3.3	Over and under temperature protection 3.3
HEPA-1	HEPA air filter in the air inlet
ODC-1	Open door counter
EP-5	Additional PT100 temperature sensor for remote measurement
DA-1	Audible door alarm

ADDITIONAL ACCESSORIES ARE AVAILABLE INCLUDING ROTARY MIXERS, ACCESS PORTS, CASTORS, TABLES, COMMUNICATION AND CALIBRATION-IQ/OQ/PQ. ASK FOR DETAILS OR REFER TO www.nickelectro.co.uk FOR MORE INFORMATION.

NATURAL CIRCULATION OVENS

NE9-E series, Ovens, natural circulation

An economical range of Clifton Ovens featuring precision temperature control up to 250°C featuring wipe clean controls and digital display of set or actual temperature.

NE9-56E

Cat. No.	NE9-15E	NE9-32E	NE9-56E
Capacity, litres	15 l	32 l	56 l
Internal Dims ²	320w x 200d x 240h mm	400w x 250d x 320h mm	395w x 360d x 395h mm
Overall Dims	440w x 350d x 520h mm	520w x 400d x 600h mm	590w x 560d x 690h mm
Sensitivity @ 70°C ¹	±0.7°C	±0.7°C	±0.7°C
Shelves fitted	1	1	2
Shelves max no.	2	3	5
Heater, Watts	600W	1100W	1600W
Voltage	230V	230V	230V

1. Sensitivity based on fluctuation in temperature on shelf in centre chamber.
2. Working capacity of chamber can be smaller.
3. Before ordering please check the room or building access where this Incubator will be installed and electrical power requirements.
4. Oven construction stainless steel powder coated.

Features Include:

- * Temperature
 - range: ambient +5°C - 250°C
 - microprocessor control, single temperature probe
 - auto diagnostic system
 - digital display to 1°C resolution
 - calibration certificate @ 105°C
- * Temperature and time programmable
 - one segment temperature-time profile with delay¹³ and timer at set-point from 1 minute to 99 hours.
 - timer activated once set point is reached¹²
 - continuous mode at set point with option timer up to 99 hours
- * Over-temperature protection
 - class 1, thermal fuse⁷
 - temperature sensor fail alarm
 - power failure alarm
- * Chamber
 - natural air circulation
 - stainless steel 304
 - solid door, options available
 - shelf maximum loading 10 kg

ACCESSORIES - FACTORY FIT OPTIONS

NE9-E series Ovens

DOOR WITH VIEWING WINDOW

Viewing window in the solid door allows chamber area to be viewed whilst retaining working temperature in the chamber - this also **saves energy.**

Cat No.	Description
W-56	Door with viewing window, for 56 litre ovens
W-112	Door with viewing window, for 112 litre ovens
W-240	Door with viewing window, for 240 litre ovens

WIRE SHELVES

Cat No.	Description
SW-15	Wire shelf, max 10 kg load, for 15 litre ovens
SW-32	Wire shelf, max 10 kg load, for 32 litre ovens
SW-56	Wire shelf, max 10 kg load, for 56 litre ovens
SW-112	Wire shelf, max 10 kg load, for 112 litre ovens
SW-240	Wire shelf, max 10 kg load, for 240 litre ovens

PERFORATED SHELVES

Cat No.	Description
SP-15	Perforated shelf, max 10 kg load, for 15 litre ovens
SP-32	Perforated shelf, max 10 kg load, for 32 litre ovens
SP-56	Perforated shelf, max 10 kg load, for 56 litre ovens
SP-112	Perforated shelf, max 10 kg load, for 112 litre ovens
SP-240	Perforated shelf, max 10 kg load, for 240 litre ovens

ADDITIONAL ACCESSORIES ARE AVAILABLE INCLUDING ACCESS PORTS, CASTORS, TABLES AND CALIBRATION+IQ/OQ/PQ.

ASK FOR DETAILS OR REFER TO www.nickelectro.co.uk FOR MORE INFORMATION.

DRYING CIRCULATION OVENS

NE9-S series, Ovens, fan circulation

This series of Clifton Drying Ovens feature precision time and temperature control with programming options from ambient +5°C to 300°C.

Microprocessor control with auto diagnostics, digital LCD display to 0.1°C resolution, three program memory with event log of actual temperature and time data with RS232 interface. Calibrated at 105°C with Certificate.

It can provide heating cycles to produce a controlled environment above ambient.

Featuring wipe clean touch pad controls illuminated LCD display for viewing wide range of settings, programs, temperature and time values:

The high grade 304 spec stainless steel chamber is sealed shut with a solid door. Alternative door configuration includes a window in the door allowing the observation the chamber with no temperature disturbance.

NE9-56S

Cat. No.	NE9-56S	NE9-112S	NE9-240S
Capacity, litres	56 l	112 l	240 l
Internal Dims ²	395w x 360d x 395h mm	460w x 450d x 540h mm	600w x 510d x 800h mm
Overall Dims	590w x 560d x 690h mm	650w x 650d x 835h mm	815w x 710d x 1140h mm
Sensitivity @70°C ¹	±0.3°C	±0.3°C	±0.4°C
Sensitivity @150°C ¹	±0.3°C	±0.5°C	±0.5°C

Shelves fitted	2	2	3
Shelves max no.	5	7	10
Watts	1600W	2400W	3000W
Voltage	230V	230V	230V
Weight	50kg	65kg	126kg

1. Sensitivity measurements based on temperature readings on shelf in centre of the chamber.

2. Working capacity of chamber can be smaller.

3. Before ordering please check the room or building access where this Incubator will be installed and electrical power requirements.

4. Uniformity measured in vertical axis in the chamber using Wired Shelves.

5. Oven constructed from powder coated stainless steel.

Features Include:

- * Temperature
 - range: ambient +5°C - 300°C
 - dual pt100 temperature probes ¹¹
- * Temperature and time programmable
 - operate with six segment temperature-time profile with delay ON ¹³, heating up ⁵, hold at set point ¹² and cooling down - settable 1 minute to 99 hours
 - or use in continuous mode at set point with either delay start ¹³ or timed up to 999 hours ¹²
 - date and time setting, program start unsupervised ¹³
 - audible alarm and display, setting 0.5°C to 10°C about set point ¹⁰
 - fast temperature rise to attain set point or normal for no overshoot ⁹
- * Over-temperature protection
 - class 1, thermal cut out 310°C and separate element overheat protection ⁷
 - class 2, experiment/sample protection, adjustable setting above set point, heating switched off, audible and visual indication ⁸
 - temperature sensor fail alarm ¹¹

STERILISATION ERRORS

KSD series, Sterilisers, Dry heat

These Clifton Sterilisers feature precision time and temperature control with programming options suitable for hot-air sterilisation of containers and instruments up to 250°C.

Steriliser features door locking and chamber vent closure when starting and during a sterilisation program.

Microprocessor control with auto diagnostics, digital LCD display to 0.1°C resolution, twenty program memory with event log of actual temperature and time data with RS232 interface. Calibrated at 170°C with Certificate.

Featuring wipe clean touch pad controls illuminated LCD display for viewing wide range of settings, programs, temperature and time values.

The high grade 304 spec stainless steel chamber is sealed shut with a solid door. Other door options available include a window in the door.

STEAM STERILISERS

KS series, Sterilisers, Steam

This Koch Steriliser is a laboratory Steriliser, using steam to sterilise small unwrapped instruments which displaces air passively from the chamber and its load by steam generated within the steriliser.

Inside the unit it is fitted with two removable shelves with looped handles making for easy retrieval and ease of loading/unloading.

The lid is designed to ensure condensed steam runs back into the chamber and can be removed using insulated lifting handles.

For safe steaming the water level is governed by a reservoir on the side which requires connection to a regulated water supply to maintaining boiling and safe water levels. The reservoir provides a visual indication of the waterlevel in the steriliser.

Cat. No.	KS1	KS2
Capacity, litres	35 l	60 l
Internal Dims	300w x 302d x 500h mm	400w x 400d x 500h mm
Overall Dims	329w x 329d x 690h mm	431w x 431d x 690h mm
Shelf size	288w x 288d mm	380w x 380d mm
1st shelf working height	202mm	202mm
2nd shelf working height	190mm	190mm
Shelves fitted	2	2
Watts	1000W	1000W
Voltage	230V	230V

1. A European standard for benchtop steam sterilisers classifies benchtop steam steriliser cycles according to the types of load they are intended to process.
2. This steriliser is known as a 'Type N' cycle. Being the simplest type and economical to operate and maintain.
3. It is referred to as a Koch Steamer in guidance notes.
4. Suitable for Load type 'Non-wrapped solid items.' Not to be used for hollow devices or wrapped loads.

Service Support

At Nickel-Electro our customers can rely on good service throughout the life of their equipment and even give you the opportunity to download operating instructions that you may have mislaid.

Our service engineers are fully trained in the assembly and use of all Clifton instrumentation. Products can be returned to our comprehensively equipped service centre where a fast and efficient turnaround is guaranteed.

A full technical service is available.

We are keen to ensure that new and existing distributors are fully aware of our products. We can arrange training if requested.

Environmental Policy

We recognise our responsibility towards the environment and strive to ensure that all aspects of the business and its products have the least harmful effect on the environment by:

- * Designing products for long durable working life supported with comprehensive backup of spares.
- * Designing equipment using mainly metal based structures for easy conversion, recycling at the end of product life.
- * Designing equipment to reduce energy consumption during their working life.
- * Minimising waste in manufacturing and where it is produced compost, re-use or recycle.
- * Packing the Clifton range in EPI approved plastic bags, which are degradable or biodegradable.
- * Being fully aware of environmental legislation.

Anti-bacterial surfaces

Anti-bacterial finishes inhibit the growth of bacteria. It has been tested by independent specialist test houses such as the Law Laboratories (in the UK) using internationally recognized test methods and proven to be effective versus a wide range of bacteria species including *Escherichia coli* and *Staphylococcus aureus* (MRSA).

Hygienic coatings are part of a controlled approach to cleaner facilities. Within its formulation an active ingredient with proven anti-bacterial properties is bound into the coating. The efficacy of the finish applied to the Clifton range is maintained over its lifetime, as the anti-bacterial agent is integral within the paint or control panel.

In a busy laboratory environment, this finish effectively limits everyday bacteria transfer from operator to equipment and then on to other operators. This is one less source of contamination, contributing to essential clean working practices.

Key to Dimensions

Safety and product marking

Clifton range laboratory equipment carries CE mark indicating that it meets the requirements of applicable European Directives.

The Clifton range meets International Standards BS EN 61010-1, Safety requirements for electrical and electronic equipment for measurement, control and laboratory use.

Equipment used for heating additionally meets BS EN 61010-2-010 Particular requirements for laboratory equipment for the heating of materials.

Equipment used for mixing additionally meets BS EN 61010-2-051 Particular requirements for laboratory equipment for mixing and stirring.

Centrifuges meet requirements BS EN 61010-2-020 Particular requirements for laboratory centrifuges.

The Clifton range meets International Standards BS EN 61326-1 Electrical equipment for measurement, control and laboratory use - EMC Requirements both A and B classes.

Every piece of Clifton equipment has a unique serial number, recorded on our database with its manufacturing inspection data. Every item is electrically tested for safety, and a copy of test certificate enclosed in the instruction book.

Temperature performance

We pride ourselves on assuring that Clifton range performs to the highest level. All Clifton temperature controlled equipment undergoes temperature calibration, in controlled conditions, to thoroughly test its performance before release to you.

Analogue controlled equipment is checked at one temperature over its working range against a UKAS calibrated reference device. We adjust the equipment to reference temperature and check its operating sensitivity is within specification.

Digital controlled equipment is checked at two temperatures over its working range against a UKAS calibrated reference device.

Quality System

Our products are designed, developed and manufactured in a tightly controlled ISO9001:2008 environment and all products are CE compliant.

Certificate No. Q09820

Future Development

We have a policy of ongoing product development to ensure that tomorrow's laboratory is equipped with innovative, well-designed and reliable equipment.

Welcome To Nickel-Electro

Nickel-Electro is a wholly independent, family owned company, based in the South West of England. We design and manufacture the well known Clifton Range of temperature controlled equipment and instrumentation, which includes unstirred, stirred, shaking baths, digital hotplates and the innovative Duobaths. Trading since 1941, continued investment and development has established Nickel-Electro as a leading manufacturer of laboratory instrumentation.

In addition Nickel-Electro manufactures a comprehensive range of laboratory consumables in a variety of materials including aluminium, stainless steel and nickel. This complements the Clifton Range and provides our customers with a single source of many types of laboratory equipment.

We carry out all manufacturing processes in our own factory to ensure that the highest standards of quality control are strictly adhered to and that lead times are closely monitored. This ensures a flexible and fast response to changing demands.

We also operate an in-house toolmaking division, which guarantees flexibility in design, rapid production and the continuity of our manufacturing process.

Our commitment to all round high standards of product excellence and quality is demonstrated by our accreditation to ISO9002 since 1991.

CENTRIFUGES

MICRO NE000
TARGA NEO10
INTERLOCK NEO10
INTERLOCK, ANALOGUE NEO20
INTERLOCK, DIGITAL NEO30

CENTRIFUGES

NE000 series, Micro

A compact personal Micro Centrifuge designed for micro tubes or PCR strips for simple and quick spins.

Using reliable and proven motor technology providing a smooth and quiet operating compact micro centrifuge. With a small footprint and easy method of rotor removal for cleaning or fitting accessory rotors. It comes supplied with rotor as standard which accepts 0.5 and or 1.5ml micro tubes.

Cat. No.	NE 000G/I
Operation	Rotor activated on speed selection
Max speed	2000 - 8000rpm
Rotor type	Angle head
Tube Capacity	0.5 and 1.5ml micro tubes
Max number tubes	6 each size
Max RCF	4000g
Overall, dims	Lid closed 175w x 220d x 140hmm
	Lid open 175w x 220d x 320hmm
Voltage	100 - 230V

Features Include:

- Lid interlock whilst rotor is energised
- Quiet and smooth operation
- Speed control variable up to 8000rpm
- Dynamic braking
- Ideal for quick spin downs
- Easy to use
- Suitable for micro filter cell separations and HPLC samples
- Durable chassis
- Non slip feet for stability and safety

NE030 series, Interlock, Digital

Featuring a highly specified centrifuge which is suitable for daily use at an affordable price.

A bench top centrifuge with wipe clean control panel, touch pad controls and digital display, broad speed range and in-built safety monitoring system. Featuring "active lid cooling" making it suitable for biological separations and sampling which can suffer heat damage. The active cooling draws fresh air in from outside and expels warm air from the rotor assembly through the back of the lid. Supplied without a rotor, enabling the right head to be chosen for the application, from micro to conical tubes.

With safety features such as automatic rotor imbalance alarm and rotor recognition limiting the maximum permissible speed.

Easy to use with digital display of speed, acceleration, braking and time settings. In use the centrifuge has the added convenience of an audible alarm at the end of the timed period.

Cat. No.	NE 030GT/I
Operation	Timer
Max speed	500 - 13000rpm
Rotor type	Angle head [■]
Timer	6 - 60mins
Braking/acceleration	1 - 9 levels
Overall, dims	Lid closed 275w x 330d x 240hmm
	Lid open 275w x 330d x 670hmm
Rating	400W
Voltage	230V, 50-60Hz

■ Accessory rotor - see page 11

Features Include:

- Easy to read digital display
- Brake and acceleration control
- Touch button controls
- Speed and time setting
- Wipe clean chemical resistant control panel
- Active cooling system to reduce thermal shock
- Powder painted body providing a durable finish

CENTRIFUGES

NE020 series, Interlock, Analogue

This centrifuge is ideal for clinical applications and is supplied with a fixed angle head rotor for test tubes.

Durable design with safety lid interlock

Features Include:

- Variable rotor speed and timer
- Selected rotor speed constantly monitored and maintained
- Electronic timer
- Safety lid interlock
- Easy to use
 - set time and speed
 - push button to start or stop process
- Warning indicators for rotation and lid unlocked
- Non slip feet

● No accessory rotors available

NE010 series, Targa

The Targa Centrifuge is designed specifically for the education market being a low cost, low energy product.

Constructed with a durable steel body for safety with four-place swing out rotor complete with removable buckets.

Features Include:

- Maintaining finger pressure on the push button operates the centrifuge and locks the lid in position
- The rotor can only be energised when the lid is correctly closed and locked
- A viewing window in the lid enables the rotor motion to be observed
- Releasing finger pressure de-energies the rotor
- Rotor energised warning indicator

● No accessory rotors available

- Easy wipe clean bowl with no crevices
- Rotor can be removed for easy cleaning

CENTRIFUGES

NE010 series, Interlock

This range consists of two models constructed with a steel body with four-plate swing out rotor complete with removable aluminum buckets. Each version has safety interlock, which prevents the lid being opened until the rotor is at rest.

An additional safety feature ensures that in the case of power failure the lid remains in the locked position. The product can only be operated if the lid is correctly closed and locked in position.

Features Include:

- Control panel has a series of indicator lamps
 - for rotor on, lid locked and rotor run down

- Maintaining finger pressure on the push button operates the centrifuge and locks the lid in position
- Releasing finger pressure de-energies the rotor, but the lid remains locked until the rotor is at rest

Features Include:

- Control panel has a series of indicator lamps
 - for rotor on, lid locked and rotor run down

- Timer allows variable rotor operation up to 30 mins
 - push button activates timer, illuminated
 - lid remains locked until rotor is at rest

CENTRIFUGES

NE040 series, Refrigerated **NEW2010**

This Refrigerated Centrifuge is suitable for use in medical, industrial and scientific applications using accessory angle head rotors for either tubes, microtubes, pcr tubes and haematocrit tubes.

The maximum rotational speed of 16,200 rpm produces a centrifugal force of 25,000g using a quiet brushless induction motor.

For safe running and use it features an electronic control with a wide number of programming options with built-in error detection preventing incorrect values from being accidentally entered. Up to 10 programs can be saved whilst last program run remains in memory for convenient re-use, even after power off.

Cat. No.	NE 040GTR
Operation	0-99min Timer and Cooling 0°C
Max speed	500 - 16200rpm
Rotor type	Angle head
Timer	0 - 99mins, with HOLD
Braking/acceleration	1 - 9 levels
Cooling control	-9°C to 40°C [20°C to 4°C in 20mins]
Overall, dims	Lid closed 282w x 665d x 360hmm
Rating	900W
Voltage	230V, 50-60Hz

Features Include :

- Easy to read digital display cooling temperature, rotor speed and time.
- Brake and acceleration control
- Touch pad and dial setting
- Speed setting either in RPM or RCF
- Refrigerated cooling system able to maintain 0°C even when rotor is running maximum speed.
- 'Fast cool' function 20°C to 4°C in 20 minutes
- 'Quick run' function, push and hold
- Quiet induction motor
- Automatic rotor recognition for safe running speeds
- Rotors can be autoclaved
- Powder painted body providing a durable finish
- Narrow/deep design maximises benchtop space.

Tube capacity	5ml ϕ 12x82mm	10ml ϕ 16x105mm
Max number of tubes	16	12
Acceleration	15 sec to max speed	15 sec to max speed
Braking	14 sec from max speed	14 sec from max speed
Max radius	105mm	115mm
Max RCF	2930g	3200g

HIGH SPEED - HAEMATOCRIT ROTOR WITH READER

Rotor Cat. No.	R040-3
Max speed	14000rpm
Tube capacity	24 glass tubes
Tube dims	ϕ 1.6x75mm
Max radius	92mm
Max RCF	20160g

HIGH SPEED - PCR ROTOR

Rotor Cat. No.	R040-4
Max speed	14000rpm
Tube capacity	6 x 8 PCR strips
Tube dims	-
Max radius	92mm
Max RCF	24000g

N.B. Rotors can be autoclaved

The essence of the Chill Bucket.

PRODUCTS AVAILABLE

- CHILL BUCKET™ with Beads
BUCB-1 Chill Bucket, two Chill
Packs, and a Bead Bag with 2 L Beads.

WATERLESS SOLUTIONS THAT PROTECT YOUR LAB WORK

The Chill Bucket™ makes it easy to run your experiments without risking contamination from wet ice. Now you can cool everything ice-free - Lab Armor Beads power the new Chill Bucket. From 4 °C to -20 °C, the Chill Bucket delivers up to 4 hours of constant cooling on one ice pack or with a handful of dry ice pellets. Every Chill Bucket Kit includes a durable polyurethane

laboratory bucket and lid, two gel packs, and a mesh sack filled with 2 liters of metallic thermal beads. Essentially, you get a completely reinvented ice bucket. The Chill Bucket™ gives you amazing new ways to cool samples while keeping them dry and contamination-free. Its so cool, you'll never use ice again. We promise.

Lab ARMOR™

So smart. So cool.

IN THE BOX

CHILL BUCKET WITH LID

TWO CHILL PACKS

BEAD BAG WITH 2 L BEADS

CHILL BUCKET

- * FOUR LITER CAPACITY
- * POLYURETHANE CONSTRUCTION
- * DURABLE & LIGHTWEIGHT
- * SHAPED TO BALANCE IN ONE ARM.
- * MOLDED SIDE KNOBS
- * INCLUDES LID
- * CONDENSATION FREE
- * HAND WASH WITH MILD DETERGENT, TOWEL DRY
- * H 7.0 X W 10.5 X D 7.0"
(H 17.8 X W 26.7 X D 17.8cm)

DRY BEADS ARE A BETTER SOLUTION THAN WET ICE

Vessels stay dry and in place. Keep samples organized. Avoid water puddles and float-away tubes.

Get greater temperature flexibility. Use Chill Packs or dry ice. Use ambient or cold beads.

Save on energy-consuming ice machines. The Chill Bucket can replace ice wherever ice is used.

CHILL PACKS

- * DURABLE RUBBERMAID GEL PACK
- * LASTS FOR HOURS
- * REUSABLE; FREEZE AND REUSE
- * NON-TOXIC

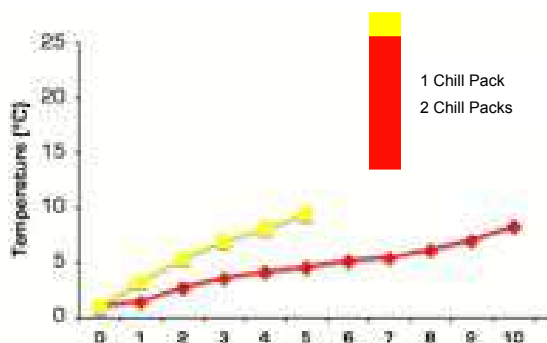

HERE'S HOW IT WORKS

Cool the Bead Bag and Chill Packs in your refrigerator or freezer. Then assemble the Chill Bucket - Chill Packs on bottom. Use the bucket and Chill Packs at 0-8 °C or substitute the Chill Packs with dry ice for -20 °C temperatures, or you can even create your own custom temperature range by starting with beads at ambient or cooled to 4 °C, - 20 °C, or 80°C.

PERFORMANCE SPECIFICATIONS

The Chill Bucket can maintain cold temperatures for 4 or more hours with one Chill Pack.

If you need up to 8 or more hours of cold, simply add a second Chill Pack to the bucket.

BEAD BAG

- * DURABLE NYLON MESH FABRIC
- * SEE THRU FOR VISIBILITY
- * WASHABLE
- * MILDEW AND ROT RESISTANT
- DRAWSTRING CLOSURE
- H 17.25 X W 12.5 X D 12.25"
(H 44 X W 32 X D 31 cm)

BATH ARMOR™

FULL METAL

Then use around the Lab

The new Walkabout Scoop Tray is clever. It's a quarter the size of a traditional lab bucket. Making it easy to use under extraction hoods or in tight benchtop spaces. With its superior insulative properties, it keeps your samples and reagents at temperature after removing them from the bead bath, Chill Bucket™, or the refrigerator. It lets you feel good about taking your time.

Beads can help reduce temperature fluctuations in your air-filled lab equipment. In your refrigerator. In your incubator. In your oven. Never mind about racks. They don't protect your samples. You can place your vessels into warm or cold beads and always find them at the perfect temperature. The beads resist changes in air temperature, so it's easy to trust the integrity of your samples, no matter how many times your co-workers opened the refrigerator's or incubator's doors.

THE *Clifton* RANGE

Bead Bath. No water. Avoid risks from water-borne microbes. Keep your reagents warm, clean, and dry. ▶

StayTemp Trays. Keep samples at constant °C despite fluctuations in surrounding air temp in the oven or incubator. ▶

StayTemp Trays. Keep samples at constant °C despite fluctuations in surrounding air temp in the frig or freezer. ▶

Chill Bucket. No Ice. Avoid molds from ice machine. Keep your reagents and samples cold, clean, and dry. ▶

Walkabout. Scoop beads out of the Bead Bath and into Walkabouts for use under the hood or on the bench. Keep precious cells and reagents warm, clean, and dry. ▶

CHILLOBATHS	NE7

STIRRED H S

NE4- T series, thermostat control

Stirred Clifton water baths are designed for immersion of flasks/bottles/racks in a stable temperature environment

This entry level thermostatically controlled analogue Thermostirrer is housed in a durable corrosion resistant stainless steel body. Immersed components are corrosion resistant. The Thermostirrer features a safety cut-out float switch, illuminated on/off switch, low liquid, heater indications. The Thermostirrer is supplied with a stainless steel mounting bridge to fit the selected tank. Each bath consists of a 304 spec stainless steel tank contained within a sturdy outer case with chemical resistant paint finish and is complete with a stainless steel shelf, designed for good temperature stability.

Cat No	NE4-8T	NE4-14T
Capacity, litres	8 l	14 l
Working dims	129w x 298d x 150h mm	219w x 298d x 150h mm
Overall dims	271w x 332d x 170h mm	361w x 332d x 170h mm
Heater, Watts	1250W	1250W
Voltage	230V	230V

1. The Thermostirrer is available separately as NE4-T which can be mounted on a suitable vessel using accessory NE4-MB mount bracket - See page 13.
2. Above 60° C or below room temperatures it is recommended that to achieve optimum performance the bath should be covered with lid or spheres - page 13.
3. If using accessory racks please use SL4 lids.

Features Include:

- * Sensitivity: $\pm 0.2^{\circ}\text{C}$.
- * Uniformity: $\pm 0.05^{\circ}\text{C}$.
- * Temperature range: ambient $+5^{\circ}\text{C}$ - 99°C .
- * Thermostatic control - easy to use.
- * Totally unobstructed, crevice free, stainless steel tank.
- * Powerful stirring within tank - for stable temperature control
- * Safety cut-out float switch - low liquid level protection

STIR BATHS

NE4-D series, digital PID control

Stirred Clifton water baths are designed for immersion of flasks/bottles/racks in a highly stable temperature environment throughout the water bath. Available in a wide range of sizes suiting a variety of applications.

This range of digital PID controlled Thermostirrers, housed in a durable corrosion resistant stainless steel body. Immersed components are corrosion resistant. The Thermostirrer features a safety cut-out float switch, illuminated on/off switch, heater, mains and over-temperature indications. The Thermostirrer is supplied with a stainless steel mounting bridge to fit the selected tank. Each bath consists of a 304 spec stainless steel tank contained within a sturdy outer case with chemical resistant anti-bacterial paint finish and is complete with a stainless steel shelf, all designed for good temperature stability.

Cat No	NE4-8D	NE4-14D
Capacity, litres	8l	14l
Working dims	129w x 298d x 150h mm	219w x 298d x 150h mm
Overall dims	271w x 332d x 170h mm	361w x 332d x 170h mm
Heater, Watts	1250W	1250W
Over temp. alarm	+4°C, warning message, heater cut off, indicator.	+4°C, warning message, heater cut off, indicator.
Voltage	230V	230V

1. The Thermostirrer is available separately as NE4-D which can be mounted on a suitable vessel using accessory NE4-MB mount bracket - See page 13.
2. For operation at temperatures below ambient an accessory cooling system DC1-300 or more powerful DC2-300 for larger tanks or rapid cooling - See page 14.
3. Above 60° C or below room temperatures it is recommended that to achieve optimum performance the bath should be covered with lid or spheres - page 13.
4. Painted body and splash proof controls feature Anti-bacterial protection, a hygenic coating which actively inhibits bacterial growth.
5. If using accessory racks please use SL4 lids.
6. A larger size of water bath is available (NE4-38D, NE5-56D).

Features Include:

- * Sensitivity $\pm 0.1^{\circ}\text{C}$.
- * Uniformity $\pm 0.01^{\circ}\text{C}$.
- * Temperature range: ambient $+5^{\circ}\text{C}$ - 99°C .
- * Accessory cooling: ambient to -20°C .
- * Clear 3 digit display: 0.1°C (-20 - 99°C).
- * Precision control
 - In normal use 'Adaptive PID'.
 - Changeable conditions or liquids
- * Powerful stirring within tank
 - Excellent temperature control.
- * Durable in use
 - Bath body zinc coated steel, for corrosion protection, powder coated exterior with a chemical resistant anti-bacterial paint.
 - Stainless steel tank, corrosion resistant and easy to clean, crevice free.
 - Thermostirrer body corrosion resistant stainless steel, with splash proof controls.
- * Safety cut-out float switch
 - Low liquid level protection
- * Removable stainless steel shelf supplied
- * Auto setting Under and Over temperature alarm
- * Timer
 - Variable, 00hrs.01mins - 99hrs.59mins

NE4-D/CT series, digital thermostatic control - acrylic tank

Stirred Clifton water baths are designed for immersion of flasks/bottles/racks in a highly stable temperature environment throughout the water bath. Available in a wide range of sizes suiting a variety of applications.

The sturdy clear acrylic tank allows observation of samples, complete with stainless steel shelf all designed for good water circulation and water temperature stability.

Supplied with a stainless steel bridge to mount the thermostirrer to the tank.

Factory pre-set two point calibration on every unit.

Cat No	NE4-8D/CT	NE4-14D/CT
Capacity, litres	8l	14l

NE4-P series, water Circulators

A range of water baths for external circulation of temperature controlled water in a closed circuit.

Digital PID controlled Thermocirculator with timer is housed in a durable stainless steel case. Immersed components are corrosion resistant. The Thermocirculator features a safety cut-out float, illuminated mains, heater and alarm temperature indications. The Thermocirculator is supplied assembled to a stainless steel mounting bridge which features push-fit and lock fittings for inlet and outlet accessory hoses for external water circulation. Each bath consists of a 304 spec stainless steel tank contained within a sturdy outer case with chemical resistant anti-bacterial paint finish and is complete with a stainless steel shelf providing good water temperature stability.

Cat No	NE4-8P	NE4-14P

Cat. No. BP0368 Pk qty 200

DEPTH

This deep chamber bath is suitable for Gerber testing and Plasma thawing applications where tall water volumes are required.

The digital PID temperature controlled Thermostirrer is housed in a durable corrosion resistant stainless steel body. Immersed components are corrosion resistant. The Thermostirrer features a safety cut-out float switch, illuminated on/off switch, heater, mains and over-temperature indications. The Thermostirrer is supplied with a stainless steel mounting bridge to fit the selected tank. The chamber consists of a 304 spec stainless steel tank contained within a sturdy painted outer case and is complete with a stainless steel shelf, all designed for good temperature stability.

Cat No	NE4-25D
Capacity, litres	25 l
Internal dims	389w x 235d x 330h mm
Overall dims	440w x 265d x 370h mm
Heater, Watts	1250W
Over temp. alarm	+4°C, warning message, heater cut off, indicator.
Sensitivity	±0.1°C
Uniformity	±0.1°C
Voltage	230V

ACCESSORIES

6880	12 hole stainless steel Butyrometer rack max. 3 racks per bath
ET0564	Thermometer
SA01293	Plasma bag clips - pair max. 4 pair per bath

IMMERSION

This refrigeration cooler has no temperature control, as it is designed to be used in conjunction with a stirred or circulating water bath, where its immersion coil is specially designed to fit into rear access hole behind the Thermostirrer without sacrificing the working area. The immersion cooler runs continuously with the bath providing temperature control.

Features Include:

- * Stainless steel immersion coil - corrosion resistant
- * Replaces wasteful use of cold water cooling

Cat No	DC1-300	DC2-300

BIRAU TARS

NE7 series
ChilloBaths

This Chiller Circulator range of water baths are specially designed for circulating temperature controlled liquids maintaining temperature in analytical equipment, heat removal or immersion of samples.

The ChilloBath consists of a stainless steel tank fitted above a cooling system with a Thermocirculator immersed into tank. All immersed components are corrosion resistant. The Thermocirculator features a safety cutout float switch - low liquid level protection, an adjustable over temperature safety device, heater, timer and alarm indications, PID temperature control and timer .

The Circulator features an advanced PID temperature controller which can be used in either of the following ways, single point temperature control and process control with two temperatures and a time setting.

The Thermocirculator is supplied assembled to a stainless steel mounting bridge which features 'push-fit and lock fittings' for secure external liquid circulation. The bath consists of a 304 spec stainless steel tank and heat exchange coil for optimal cooling with a stainless steel shelf all giving good temperature stability .

Supplied with flat lift-off lid with insulated handle which can be substituted with accessory SL4 Gable Lid for immersion of taller samples in the bath.

Features Include:

- * Sensitivity $\pm 0.1^{\circ}\text{C}$
- * Uniformity $\pm 0.01^{\circ}\text{C}$
- * Temperature range: $-20 - 130^{\circ}\text{C}$
- * Digital PID control
- * Clear 3 digit display
- * Display resolution: $0.1^{\circ}\text{C} (-20^{\circ}\text{C} - 99^{\circ}\text{C})$
- * Precision control
- * Powerful circulation pump - closed loop
- * Convenient push-fit and lock fittings - for secure external water circulation
- * Stainless steel tank
- * Safety cut-out float switch - low liquid level protection
- * Refrigeration condenser easily cleaned

Cat. No .	NE7-8
Capacity, litres	8l
Temperature range	$-20 - 130^{\circ}\text{C}$
Working volume litres	6
Temperature sensitivity	$\pm 0.1^{\circ}\text{C} @ 0^{\circ}\text{C}$
Temperature uniformity	$\pm 0.01^{\circ}\text{C} @ 0^{\circ}\text{C}$
Effective bath opening	129w x 298d mm
Overall, dims	451w x 332d x 805h mm
Working, dims	129w x 298d x 150h mm
Cooling capacity W	
+20°C	1000
0°C	640
-10°C	440
-20°C	279
Refrigerant	R134a
Drain, Fitted	Yes
Over temp. alarm	+4°C warning message, heater cut off indication
Under temp. alarm	-4°C with indication
Pump capacity l/min	10
Pump pressure	1.5m head
Heater, Watts	1250
Voltage	230V

1. It is recommended that to achieve optimum performance the bath should be covered.
2. A full range of accessories are available, ask for details or refer to www.nickel-electro.co.uk.
3. Push-fit and lock fittings suitable for 6mm O/D tubing.

Service Support

At Nickel-Electro our customers can rely on good service throughout the life of their equipment and even give you the opportunity to download operating instructions that you may have mislaid.

Our service engineers are fully trained in the assembly and use of all Clifton instrumentation. Products can be returned to our comprehensively equipped service centre where a fast and efficient turnaround is guaranteed.

A full technical service is available.

We are keen to ensure that new and existing distributors are fully aware of our products. We can arrange training if requested.

Environmental Policy

We recognise our responsibility towards the environment and strive to ensure that all aspects of the business and its products have the least harmful effect on the environment by:

- * Designing products for long durable working life supported with comprehensive backup of spares.
- * Designing equipment using mainly metal based structures for easy conversion, recycling at the end of product life.
- * Designing equipment to reduce energy consumption during their working life.
- * Minimising waste in manufacturing and where it is produced compost, re-use or recycle.
- * Packing the Clifton range in EPI approved plastic bags, which are degradable or biodegradable.
- * Being fully aware of environmental legislation.

Anti-bacterial surfaces

Anti-bacterial finishes inhibit the growth of bacteria. It has been tested by independent specialist test houses such as the Law Laboratories (in the UK) using internationally recognized test methods and proven to be effective versus a wide range of bacteria species including *Escherichia coli* and *Staphylococcus aureus* (MRSA).

Hygienic coatings are part of a controlled approach to cleaner facilities. Within its formulation an active ingredient with proven anti-bacterial properties is bound into the coating. The efficacy of the finish applied to the Clifton range is maintained over its lifetime, as the anti-bacterial agent is integral within the paint or control panel.

In a busy laboratory environment, this finish effectively limits everyday bacteria transfer from operator to equipment and then on to other operators. This is one less source of contamination, contributing to essential clean working practices.

Key to Dimensions

Safety and product marking

Clifton range laboratory equipment carries CE mark indicating that it meets the requirements of applicable European Directives.

The Clifton range meets International Standards BS EN 61010-1, Safety requirements for electrical and electronic equipment for measurement, control and laboratory use.

Equipment used for heating additionally meets BS EN 61010-2-010 Particular requirements for laboratory equipment for the heating of materials.

Equipment used for mixing additionally meets BS EN 61010-2-051 Particular requirements for laboratory equipment for mixing and stirring.

Centrifuges meet requirements BS EN 61010-2-020 Particular requirements for laboratory centrifuges.

The Clifton range meets International Standards BS EN 61326-1 Electrical equipment for measurement, control and laboratory use - EMC Requirements both A and B classes.

Every piece of Clifton equipment has a unique serial number, recorded on our database with its manufacturing inspection data. Every item is electrically tested for safety, and a copy of test certificate enclosed in the instruction book.

Temperature performance

We pride ourselves on assuring that Clifton range performs to the highest level. All Clifton temperature controlled equipment undergoes temperature calibration, in controlled conditions, to thoroughly test its performance before release to you.

Analogue controlled equipment is checked at one temperature over its working range against a UKAS calibrated reference device. We adjust the equipment to reference temperature and check its operating sensitivity is within specification.

Digital controlled equipment is checked at two temperatures over its working range against a UKAS calibrated reference device.

Quality System

Our products are designed, developed and manufactured in a tightly controlled ISO9001:2008 environment and all products are CE compliant.

Certificate No. Q09820

Future Development

We have a policy of ongoing product development to ensure that tomorrow's laboratory is equipped with innovative, well-designed and reliable equipment.

Nickel

Commercially pure or low-alloy nickel has characteristics that are useful in several fields, notably chemical processing. Nickel is highly resistant to various reducing chemicals and is unexcelled in resistance to caustic alkalis. Nickel 201 is a commercially pure nickel with high thermal conductivity.

Nickel 201

Nickel 201 is commercially pure (99.6%) wrought nickel and a low carbon version of Nickel 200. It has good mechanical properties and excellent resistance to many corrosive environments. Other useful features: high thermal and electrical conductivities, low gas content and low vapour pressure. The corrosion resistance makes it particularly useful for maintaining product purity in the handling of foods, liquids, synthetic fibers, and caustic alkali's.

High-temperature and Corrosion Resistance properties

Nickel 201 has the excellent corrosion resistance characteristic of Nickel 200. Because it is a low-carbon material (0.02% max.), Nickel 201 is not subject to embrittlement by intergranularly precipitated carbon or graphite when held at temperatures of 315° to 760°C for extended times, provided carbonaceous materials are not in contact with it. It is, therefore, preferred to Nickel 200 in all cases where temperatures exceed 315°C. Nickel 201 is ideal for laboratory crucibles which are capable of withstanding oxidizing furnace atmospheres up to 1100°C. Above 300°C its mechanical properties change: tensile strength falls, elongation grows making for example a crucible more malleable when handling or when heated by a direct flame. This can lead to a change in the profile/shape of a crucible. The material is subject to intergranular embrittlement by sulphur compounds at temperatures above 315°C.

Water

The resistance of Nickel 201 to corrosion by distilled and natural waters is excellent since resistant to water containing hydrogen sulphide or carbon dioxide. Nickel 201 gives excellent service in seawater.

Acids

Sulphuric

Nickel 201 can be used with Sulphuric acid at low or moderate temperatures.

Hydrochloric

According to the data available, Nickel 201 may be used in hydrochloric acid in concentrations up to 30%, at room temperature. Increasing temperature will accelerate corrosion. If oxidizing salts are present in any but very small amounts, corrosion will be increased. At less than 0.5% concentration, the material can be used satisfactorily up to 150°-205°C.

Hydrofluoric

Nickel 201 has excellent resistance to anhydrous hydrofluoric acid even at elevated temperatures. In aqueous solutions, however, service is usually limited

Nickel contd.

to below 80°C. Even at room temperature, 60-65% commercial-grade acid has been found to severely corrode Nickel 201.

Phosphoric

Nickel 201 is resistant to phosphoric acid.

Nitric

Nickel 201 should not be used in nitric acid.

Organic

In general, Nickel 201 has excellent resistance to organic acids of all concentrations.

Alkali's

The outstanding corrosion resistance characteristic of Nickel 201 is its resistance to caustic soda and other Alkali's. (Ammonium hydroxide is an exception. Nickel 201 is not attacked by anhydrous ammonia or ammonium hydroxide in concentrations of 1%. Stronger concentrations can cause rapid attack.)

In caustic soda, Nickel 201 has excellent resistance to all concentrations up to and including the molten state. Below 50%, rates are negligible, even in boiling solutions. As concentration and temperature increase, corrosion rates increase very slowly. The chief factor contributing to the outstanding performance of Nickel 201 in highly concentrated caustic soda is a black protective film that forms during exposure. This film – nickel oxide – results in a marked decrease in corrosion rates over long exposure under most conditions. Because the presence of chlorates in caustic increases corrosion rates significantly, every effort should be made to remove as much of them as possible. Results of tests in sodium hydroxide solutions of varying concentrations produces a typical thin black oxide film, found on some of the samples in the tests at boiling temperature. Oxidizable sulphur compounds are also harmful, but, by adding sodium peroxide to change them to sulfates, their effect can be minimized.

Salts

The metal is not subject to stress-corrosion cracking in any of the chloride salts and has excellent resistance to all of the non-oxidizing halides. Oxidizing acid chlorides such as ferric, cupric and mercuric are very corrosive and should be used in low concentrations. Stannic chloride is less strongly oxidizing, and dilute solutions at atmospheric temperature are resisted. The maximum safe limit in oxidizing alkaline chlorides is 500 ppm available chlorine for continuous exposure. In bleaching, sodium silicate (1.4 specific gravity) can be used as an inhibitor to corrosion; as little as 0.5ml/liter of bleach has been found to be effective. Some very reactive and corrosive chlorides – phosphorus oxychloride, phosphorus trichloride, nitrosyl chloride, benzyl chloride and benzoyl chloride – are commonly contained in Nickel 201. It has excellent resistance to neutral and alkaline salt solutions.

The METALWARE RANGE

Nickel contd.

Fluorine and chlorine

In comparison with other commercial metals and alloys, Nickel 201 has outstanding resistance to dry fluorine. Nickel 201 is the most practical for service in chlorine or hydrogen chloride at elevated temperatures.

Zirconium

Many regard Zirconium as a rare metal yet it is not uncommon but an exotic material. Zirconium, however, has many rare, even unique, qualities such as its remarkable corrosion resistance, being used extensively in the chemical processing industry. Zirconium will withstand a range of caustics and acids to a greater degree than any other commonly used metal and stands in a class by itself.

Cleaning Zirconium crucibles

Hydrofluoric acid is the only cleaning agent that should not be used to clean zirconium crucibles.

Applications for Zirconium Crucibles

Zirconium crucibles are suitable for several applications in the analytical chemistry.

- Sodium Peroxide Fusions - used with refractory or high-silica materials such as chromate, magnetite, ilmenite, rutile, silicon, silicon carbide, and certain alloys and steels. An excellent general flux for almost any material.
- Sodium Carbonate Fusions - decomposes most silicates of aluminum, calcium, chromium, nickel; also halides of silver; and sulphates of barium and lead.
- Lithium Salt Fusions - flux for oxide and silicate materials when sodium and potassium need to be determined or when large amounts of sodium would interfere with x-ray fluorescence or atomic absorption procedures.

Fusions in Zirconium Crucibles

Fusions are best made in the reducing flame of the burner where there is little or no attack or oxidation of the crucible - regardless of the sample material or flux mixture.

In making fusions, the sample is mixed with 4 to 10 times its weight of flux and placed over a bed of flux in the crucible. The burner set-up should be under a fume-hood and positioned under a Tripod [Stock No. TR1,TR2,TR3 or TR5]. Initially, the crucible and contents should be gently introduced over the flame, moving it in and out as melting commences. When molten, the heat can be raised and the contents 'swirled' to keep the sample off the bottom - use any of Stainless Steel tongs [Stock No.3030 > 3066] to handle the crucible and accomplish the swirling action, which should be continued throughout the fusion process. When molten it either becomes clear/homogeneous, or a very bright red, the fusion is now complete. The fused mass can be allowed to solidify in the crucible. The crucible and contents can then be placed in a beaker covered with water and the suitable solvent added to remove the fused mass from the crucible. Any material adhered to crucible can be dissolved out with more solvent. Under these conditions only a few milligrams of zirconium will be introduced into the sample. If this trace needs removing it can be accomplished by using strong acid solutions (HCl, H₂SO₄).

Zirconium contd.

Fluxes which can be used in Zirconium Crucibles

Listed below are fluxes that can be used to reduce melting points along with some applications that are normally troublesome.

- Sodium Peroxide - use with refractory materials such as chromite, magnetite, illmenite, rutile, silicon, silicon carbide, certain alloys and steels, etc., an excellent general flux for most any material. Two precautions to be taken when fusing chromite or other material high in chrome. When these materials are fused with peroxide, the chrome is oxidized to chromate which will tend to leave a yellow film on the inside of the crucible which will be unnoticed until the crucible has been removed from the subsequent dissolving operation, rinsed and dried.

This can be prevented by adding a few milliliters of hydrogen peroxide to the acid solvent (H₂SO₄) while the crucible is still immersed. The peroxide in acid reduces chromate to chromic chrome which goes readily into solution. The excess peroxide can be eliminated by boiling. Chrome can then be determined by the usual persulfate oxidation followed by a reduction titration.

Peroxide fusions of silicon carbide and other finely pulverized metals and alloys are another matter. These materials tend to react violently at very low temperatures with oxidizing fluxes and will often burn right through iron or nickel crucibles on their first use. However, these can be safely fused in zirconium if the sample is first mixed with about 4 to 6 times its weight of powdered anhydrous sodium carbonate; (0.25gram sample is usually more than enough) then add about twice the sample weight of sodium peroxide and mix.

The crucible and contents are then gently moved toward a fairly cool flame and moved cautiously in and out of the flame until melting around the edges begins.

It must not be put in the flame and held there unless all spattering, if any, has ceased. When the mixture appears to be melted and quiet, the temperature can be increased and fusion continued as usual. The fusion should be kept swirling and finished at a red heat.

- Sodium Carbonate: Melting Point approximately 850°C. Decomposes most silicates of aluminum, calcium, chromium nickel, etc.; also halides of silver, and sulfates of barium and lead.
- Potassium Carbonate: Melting Point approximately 910°C. Acts the same as sodium carbonate and can be mixed with it.
- Sodium and Potassium Carbonate: mixture acts as either one alone but melts at a lower temperature than either one alone.
- (Na, K) carbonates plus oxidizing agent: (KNO₃, KC₁₀₃, Na₂O₂, MgO, ZnO): Used on sulphide ores of arsenic, antimony, iron, nickel, molybdenum, etc.
- Sodium Hydroxide: Melting Point approximately 320°C. Basic flux for oxidized ores of tin, zinc, antimony, etc.
- Potassium Hydroxide: Melting Point approximately 360°C.
- Sodium Chloride: Melting Point approximately 800°C. Neutral flux. Can be used as a cover for fusion mixtures.

Zirconium contd.

- Potassium Nitrate: Melting Point approximately 340°C. Powerful oxidizing agent and basic flux. Used as a mixture with carbonates.
- Sodium Nitrate: Melting Point approximately 320°C. Acts same as potassium nitrate.
- Lithium metaborate: Melting Point approximately 840°C. Flux for various oxide and silicate materials when sodium and potassium need to be determined.
- Lithium Carbonate: Melting Point approximately 620°C.
- Lithium Hydroxide: Melting Point approximately 450°C. Can be added to other fluxes to help lower melting points.
- Lithium Fluoride: Melting Point approximately 870°C. Added to (Na, K) carbonates.
- Calcium Carbonate - Ammonium Chloride: A sintering flux used to make soluble alkalis for analysis of sodium and potassium.
- Sodium Borate (Borax glass): Melting Point approximately 740°C. Used with (Na, K) carbonates to give a lower melting flux for refractory silicates and oxides of aluminum, iron, nickel, etc.

This list of fluxes can be used in any combination in zirconium crucibles so long as the fusions are made in the reducing flame of the gas burner or in a furnace equipped to provide an inert atmosphere such as argon or maybe helium. Nitrogen might be used if the fusion time at high temperature was relatively short, but not recommended and will embrittle zirconium after exposure for long periods of time that may shorten the useful life of the crucible.

An additional benefit can be obtained by combining two or more sodium or potassium salts (carbonates, peroxides, hydroxides); or two or more lithium salts (borates, peroxides, carbonates, hydroxides). Using this procedure, the melting temperature of the fusion can often be lowered to a temperature below that at which any of the fluxes alone would melt. This lower melting point also results in an easier-to-pour melt, a faster fusion process and an increase to the useful life of the zirconium crucible.

Zirconium crucibles and covers, and other laboratory ware are an excellent alternative to the very expensive noble metals e.g platinum and fragile glass, porcelain and quartz ware for making peroxide and similar fusions in preparing samples for chemical analysis.

While prolonged exposure to air at temperatures of more than 750°C can have a negative effect on zirconium, this can be reduced by either: using cooler reduced portion of the flame, or enveloping the crucible in an inert atmosphere.

* Constant level to combat water evaporation, all models.

* Drain outlet fitted to 18 and 28 litre.

UNSTIRRED S

ShallowBath series

These shallow form Clifton baths are ideal for heating small height samples such as micro tubes and trays. Perfect for heating samples in microcentrifuge tubes and for other molecular-biology procedures.

For molecular-biology procedures these baths can be used for dry heating and incubation using Lab Armor™. Its unique properties of a dry media support the samples without blocks, racks, floats or weights. The cumbersome task and frequency of emptying, cleaning and refilling is simplified and dramatically reduced, resulting in a more productive lab, more successful experiments and less lab downtime.

* Traditional style water bath

- If using a conventional water bath the minimum liquid level for accurate operation is above the height of small bottles tubes etc, often requiring the extra expense of additional raised shelves.

* Clifton shallow form series

- Clifton shallow height water baths operate with low liquid levels suiting small bottles, tubes and micro plates.
- Low-profile design allows easy access to samples and improved visibility
- Small samples easily seen and not obscured by high sided baths
- **Use less water and energy.**

Features Include:

BA-5 Bath Armor accessory media

1. Painted body and splash proof controls on Shallow baths feature Anti-bacterial protection.
2. For full specification on NE2-2D, NE2-5D and NE2-9D please refer to NE2D series, Digital water baths.
3. For full specification on NE1-9 please refer to NE1 series, Thermostatic water baths.
4. Above 60°C it is recommended that to **save energy** and to achieve optimum performance the bath should be covered with a Lid.
5. For a full list of accessories including Lab Armor refer to Accessory pages.

UNSTIRRED S

TripleBaths

Three independent temperature controlled water baths, suitable for processing small reaction tubes, test tubes or vessels at three different temperatures, in one location.

Features Include:

- * Sensitivity: $\pm 0.5^{\circ}\text{C}$
- * Uniformity: $\pm 0.5^{\circ}\text{C}$
- * Range: ambient $+5^{\circ}\text{C}$ - 99°C
- * Thermostatic control

For wet or dry heating using Lab Armor, for PCR routines denaturing, annealing and elongation.

Clifton NE1-2/2/2 TripleBath

- Clifton shallow height water baths operate with low liquid levels suiting small bottles, tubes and micro plates.
- Low profile bath allows easy access and better visibility of samples being heated.
- Use less water and energy.

1. Painted body and splash proof controls on Shallow baths feature Anti-bacterial protection.
2. Above 60°C it is recommended that to **save energy** and to achieve optimum performance the bath should be covered with a Lid.
3. For a full list of accessories including Lab Armor refer to Accessory pages.

UNSTIRRED S

NE1 series, Thermostatic

These Clifton analogue baths are designed for general use and are economically priced without compromising quality.

Comprising of a 304 spec (18/8) stainless steel tank, housed in a durable paint finished outer case. Complete with a removable stainless steel perforated shelf. Controls feature an illuminated on/off switch and heater on indicator. For temperatures above 60°C a lid is recommended. Larger baths are fitted with a drain.

We verify the performance of every bath calibrating its controls and water temperature at 45°C for consistent temperature control in use.

Cat No.	NE1-4	NE1-8	NE1-14
Capacity, litres	4 litre	8 litre	14 litre

Overall Dims	332w x 185d x 290h mm	332w x 270d x 290h mm	361w x 332d x 290h mm
Heater, Watts	400W	800W	1000W
Voltage	120V or 230V models	120V or 230V models	120V or 230V models

1. A 2.5litre size of Thermostatic water baths available, Cat.No.NE1-2.5
2. Painted body on Clifton water baths feature Anti-bacterial protection, hygienic coating which actively inhibits bacterial growth.
3. This series of baths will operate at 100°C but are not designed for continuous boiling, we recommend NE1B series.

Features Include:

- * Temperature
 - range: ambient +5°C - 100°C ³
 - thermostatic control
 - sensitivity: ±0.25°C
 - uniformity: ±0.1°C
 - heating element, safety cut out and temperature sensor concealed
 - every water bath factory calibrated
- * Side lifting handles
 - for ease of transportation
- * Lids recommended above 60°C
 - to **save energy** and achieve optimum bath performance
- * Tank
 - corrosion resistant stainless steel
 - easy to clean
 - clutter free working area
- * Drain outlet fitted onto 22, 28 and 56 litre baths - large bore for fast emptying. Accessory gated tap can be fitted.

NE3-DT series, Digital, with run back and delay start timer

These precision temperature control water baths feature an option to enable a run back or delay start timers, the latter useful for pre-conditioning water temperature before for use.

Supplied with clear hinged polycarbonate lid, convenient to use ensuring all condensate runs back into the bath in either open or closed positions. Also featured a gated drain tap designed to quickly empty the water bath, painted antibacterial surfaces and touch flush fitting controls, with illuminated LED display for temperature and time values.

UNSTIRRED S

DuoBaths

Two independently controlled unstirred baths in one space-saving unit. Specifically designed with the busy laboratory in mind.

A painted durable steel outer case houses two high quality corrosion resistant stainless steel tanks each with their own independent controls. Three shelves are supplied with the bath, two at conventional height and a taller one designed to accommodate bijoux style bottles in a shallow depth. Using the conventional height in both chambers gives the benefit of two standard baths in one space-saving unit.

Cat No.	NE2D-4/4	NE2D-4/8

4. Other sizes available NE2D-8/8.

Benefits of Duobaths:

- * Disturbance/swamping samples
- * Different temperature in each tank
- * Shelf heights

NE2D-8/22

Features Include:

Disturbance/swamping

Single bath - shallow depth of water is unsuitable for combination of large and small vessels.

Single bath - remove large bottle/flasks and samples are out of the water

Duobath - large bottle/flask immersed to correct depth and no risk to smaller media.

Temperatures

Single bath - applications for keeping bottles of media molten and incubating culture samples will need TWO baths.

Duobath - two tanks at 2 different temperatures with added convenience for routine work to be conducted in one place in one bath.

Cross contamination of temperature from 60°C tank to 37°C tank = +0.1°C

60°C tank Preparation.

37°C tank Incubation.

Shelf heights

Duo bath - smaller volume tank has option of 2 shelves - high - for small media.

Duo bath - low shelf - for large bottles/flasks. Unique feature of Clifton baths are low height shelves maximising work depth in the tank. Also potentially lower water volumes required increasing heat up performance.

Churchill test tube racks

Churchill test tube racks have been developed in conjunction with a school to allow a classroom of students to each place a test tube into the rack for incubation and other experiments in a water bath. Churchill racks can accommodate the popular 18mm or 25mm diameter test tubes. Each rack fits into Clifton water baths and easily removed and stored flat.

Cat No.	C18-4	C18-8	C18-14

- Churchill test tube racks are manufactured from nylon.
 - Offer good resistance to solvents, formaldehyde and alcohols.
 - Limited resistance to dilute acids.
 - Not recommended for use with phenols, alkalis, iodine and acids.
 - Maximum recommended temperature 70°C.

BATH ARMOR™

FULL METAL

Then use Bath Armor

Moisture and Gas impermeable

Smooth, rounded & fluid-like

High thermal conductivity

Reduces water consumption

Water baths

- * No more filling.
- * No more routine cleaning.
- * No water borne contamination.
- * No longer incubating microbes.
- * Washes and sterilizes easily.
- * Good thermal heat distribution.

Replace water in your water bath with these thermally efficient pellets that are easy to keep clean. It enables you to eliminate nearly all water bath cleaning and protects your water bath from drying out.

Saving need for racks, floaties and bottle weights. More free time, one less lab duty, never have to wash or refill a water bath again.

Blockheaters

- * One pile suits all tube sizes.
- * Replaces pre-drilled blocks.
- * More convenient to use.
- * Thermally efficient.
- * Accepts any size and shape vessels.
- * Washes and sterilizes easily.

Replaces pre-drilled blocks in your blockheaters with thermally efficient pellets that are easy to keep clean.

Reduces investment in blocks and heating well can be used for heating any tube size or shape at the same time.

SHAKER BATHS

NE5 series SHAKERBATHS
ACCESSORIES

SHAKING BATHS

NE5-D series, Shaking

This range of Shaker water baths feature a deep drawn tank with rounded corners manufactured from stainless steel. Ideal for day-to-day use and can be easily cleaned. A reciprocating stainless steel trolley, which accepts a wide variety of accessory combinations for flasks, micro-titre plates or test tube racks.

Featuring advanced PID temperature control for precision, with set and actual temperatures displayed simultaneously. Featuring a highly accurate PT100 sensor with the added advantage of being immersed for direct measurement.

Designed and constructed for ease of use carrying a number of safety features for demanding continuous laboratory applications. Protecting your work the bath features auto setting High and Low Alarms, about set temperature. When the alarm is activated, heaters switch off, temperature details revert to a red warning display.

These Shaker baths can also be programmed with delay start, ramp and dwell at set temperature for timed period.

The NE5-28D has in addition to greater capacity, further refinements of an adjustable stroke length, access door and drain outlet.

Additionally an autotune facility allows the shaker bath to learn about applications and its environment.

Features actual temperature logging with set temperature.

With continual diagnostics and a service screen for product support.

Every shaker bath is factory calibrated at a reference temperature for assurance.

SHAKING BATHS

NE5 series, Shaking

Featuring electronic temperature and shaker speed control for sample incubation with a broad range of accessory clips and racks.

Designed for ease of use and intrinsically safe temperature control systems built in to the durable powder painted Clifton body. The bath uses a deep drawn pressing with rounded corners manufactured from stainless steel which produces the ideal environment for day-to-day use and can be easily cleaned. Inside the bath connected to shaker drive a reciprocating stainless trolley, accepts a wide variety of clip combinations of accessories for holding flasks, micro-titre plates or test tube racks. These can all be easily inter-changed and removed for cleaning purposes.

The heater and safety device are concealed beneath the tank allowing easy cleaning of full working area inside the bath.

ACCESSORIES

NE5 Shaker series accessories

The NE5-28 and NE5-28D are supplied complete with a trolley platform to accommodate universal spring tray, flask clip trays and test tube rack trays.

For the NE5-10D flask clips and test tube racks can be mounted directly onto perforated reciprocating trolley, supplied.

Flask Trays for NE5-28 and NE5-28D

A perforated tray, complete with flask clips to suit common sizes of glass/polypropylene Erlenmeyer flasks. The tray simply drops onto the reciprocating trolley and locates snugly.

Cat. No.	Description
SFT0025	39 x 25ml flask clip tray
SFT0050	32 x 50ml flask clip tray
SFT0100	18 x 100ml flask clip tray
SFT0250	12 x 250 ml flask clip tray
SFT0500	8 x 500 ml flask clip tray
SFT1000	5 x 1000ml flask clip tray
SFT2000	2 x 2000ml flask clip tray
SFT9000	Universal spring tray - a multispring tray to accommodate a variety of sizes of vessel
STT004	Test tube rack tray with side clips - accommodates up to four racks from 687x series
SBF01804	The tray provides a platform onto which racks etc can be placed. Also can be substituted for reciprocating trolley, this allows it to be used as an unstirred bath.

Flask Clip Tray

SFT9000

Test Tube Racks for NE5 series

For the NE5-10D these racks can be mounted directly onto perforated reciprocating trolley. For the NE5-28 and NE5-28D a Test tube rack tray with side clips is required, STT004.

6870	Test tube rack, stainless steel, 26 holes x 17mm dia.
6871	Test tube rack, stainless steel, 16 holes x 26mm dia.
6872	Test tube rack, stainless steel, 36 holes x 13mm dia. also suitable for 1.5ml microtubes.
6873	Test tube rack, stainless steel, 18 holes x 19mm dia.
6900	Test tube rack, stainless steel, 12 holes x 32mm dia.

STT004

1. Maximum 2 off Test Tube Racks can be fitted into the NE5-10D and fasten directly onto trolley.
2. Maximum 4 off Test Tube Racks can be fitted onto STT004 Test tube rack tray into the NE5-28 and NE5-28D.

ACCESSORIES

Lids for NE5 series

The use of a lid helps reduce evaporation and assists in keeping samples free from contamination and **saves energy**.

* Gabled lids with a high profile allowing extended use of the bath area, right into edges of the tank

* Design ensures that all condensate goes back into bath.

* No drip points to contaminate samples.

Cat. No.	Description
SL1-8	Gabled lid, lift off, stainless steel for NE5-10D
GL1-8	Gabled lid, hinged, clear polycarbonate for NE5-10D
GL1-8AF	Gabled lid, lift off, clear polycarbonate for NE5-10D
SL1-22	Gabled lid, lift off, stainless steel for NE5-28 and NE5-28D
SL1-22H	Gabled lid, hinged, stainless steel for NE5-28 and NE5-28D
GL1-22	Gabled lid, hinged, clear polycarbonate NE5-28/NE5-28D
GL1-22AF	Gabled lid, hinged, clear polycarbonate NE5-28/NE5-28D

GL1-8

SL1-22

Separate Flask Clips for NE5 series

For personalised clip arrangement, clips are supplied with all necessary fixings to enable them to be attached to the selected perforated tray SBF01804 (NE5-28D and NE5-28) or SA01773 (NE5-10D).

It is possible to mix and match a variety of clips to suit different applications.

FC0025	25ml flask clip
FC0050	50ml flask clip
FC0100	100ml flask clip
FC0250	250ml flask clip
FC0500	500ml flask clip
FC1000	1000ml flask clip
FC2000	2000ml flask clip
FC2000/HD	2000ml flask clip - heavy duty
FC3000	3000ml flask clip
FC3000/HD	3000ml flask clip - heavy duty
FC3000FB	2.8l Fernbach flask clip
FC5000/HD	5000ml flask clip - heavy duty
M11	Microplate clip
SBF01804	Perforated tray for NE5-28 and NE5-28D
SA01773	Perforated tray for NE5-10D

SFT0050

M11

Miscellaneous for NE5 series

BX0953	Drain T ap
CAL	Calibration Record
BP0368	Spheres 1 pack NE5-10D, 2 packs NE5-28 or NE5-28D
LB-5.0	5 litres - Lab Bath 4590 - Heat transfer fluid 15°C to 90°C

BX0688

ULTRASONIC BATHS

SW series ULTRASONICBATHS

ULTRASONIC

SW series, industrial

These industrial strength Ultrasonic Baths, designed for demanding applications and suitable for continuous operation. Featuring heating and timer controls with ultrasonic boost, degas and sweep functions. Drain outlet and tap fitted in models 6 litres and above.

Cat. No.	SW1H	SW3H	SW6H
Capacity, litres	1 /	3 /	6 /
Internal Dims	190w x 85d x 60h mm	240w x 137d x 100h mm	300w x 150d x 150h mm
Overall Dims	200w x 100d x 180h mm	250w x 150d x 220h mm	310w x 160d x 270h mm
Operating Frequency, kHz	37kHz		
Sonics, Watts	25W	80W	100W
Timer	1, 2, 3, 4, 5, 10, 15, 20, 25, 30 mins and permanent on position		
Heater, Watts	60W	200W	400W
Voltage	230V		

ACCESSORIES

BSK-1 Stainless steel wire Basket for SW1H

BSK-3 Stainless steel wire Basket for SW3H

BSK-6 Stainless steel wire Basket for SW6H

LD-1 Flat moulded plastic Lid for SW1H

LD-3 Flat moulded plastic Lid for SW3H

LD-6 Flat stainless steel Lid for SW6H

Features Include:

- * Stainless steel construction.
- * High performance industrial strength ultrasonics with sweep function for perfect and even distribution of ultrasonic activity.
- * Auto-Degassing function useful for liquid changes in the tank, decarbonating and degassing HPLC solutions.
- * Ultrasonic Boost function for 25% more sonic power.
- * Easy to use drain facility, 6 litres and above.
- * Heaters can safely run dry.
- * Temperature controlled ultrasonics – activity will start once set temperature is achieved.
- * Indication of time remaining.

SW45H

SW12H	SW30H	SW45H	SW90H
12 l	28 l	45 l	90 l
300w x 240d x 200h mm	505w x 300d x 200h mm	500w x 300d x 300h mm	600w x 500d x 300h mm
365w x 278d x 321h mm	568w x 340d x 321h mm	615w x 370d x 467h mm	715w x 570d x 467h mm
37kHz			
200W	300W	400W	800W
1, 2, 3, 4, 5, 10, 15, 20, 25, 30 mins and permanent on position			
800W	1200W	1600W	2000W
230V			

ACCESSORIES

BSK-12 Stainless steel wire Basket for SW12H

BSK-30 Stainless steel wire Basket for SW30H

BSK-45 Stainless steel wire Basket for SW45H

BSK-90 Stainless steel wire Basket for SW90H

LD-12 Flat moulded plastic Lid for SW12H

LD-30 Flat moulded plastic Lid for SW30H

LD-45 Flat stainless steel Lid for SW45H

LD-90 Flat stainless steel Lid for SW90H

Cleaning concentrates for SW range

SW-C series features a wide selection of cleaning concentrates, L1 to L5 grade from acidic, neutral to alkaline.

Service Support

At Nickel-Electro our customers can rely on good service throughout the life of their equipment and even give you the opportunity to download operating instructions that you may have mislaid.

Our service engineers are fully trained in the assembly and use of all Clifton instrumentation. Products can be returned to our comprehensively equipped service centre where a fast and efficient turnaround is guaranteed.

A full technical service is available.

We are keen to ensure that new and existing distributors are fully aware of our products. We can arrange training if requested.

Environmental Policy

We recognise our responsibility towards the environment and strive to ensure that all aspects of the business and its products have the least harmful effect on the environment by:

- * Designing products for long durable working life supported with comprehensive backup of spares.
- * Designing equipment using mainly metal based structures for easy conversion, recycling at the end of product life.
- * Designing equipment to reduce energy consumption during their working life.
- * Minimising waste in manufacturing and where it is produced compost, re-use or recycle.

Anti-bacterial surfaces

Anti-bacterial finishes inhibit the growth of bacteria. It has been tested by independent specialist test houses such as the Law Laboratories (in the UK) using internationally recognized test methods and proven to be effective versus a wide range of bacteria species including *Escherichia coli* and *Staphylococcus aureus* (MRSA).

Hygienic coatings are part of a controlled approach to cleaner facilities. Within its formulation an active ingredient with proven anti-bacterial properties is bound into the coating. The efficacy of the finish applied to the Clifton range is maintained over its lifetime, as the anti-bacterial agent is integral within the paint.

In a busy laboratory environment, this finish effectively limits everyday bacteria transfer from operator to equipment and then on to other operators. This is one less source of contamination, contributing to essential clean working practices.

Key to Dimensions

Engineered & Built in Great Britain

Safety and product marking

Clifton range laboratory equipment carries CE mark indicating that it meets the requirements of applicable European Directives.

The Clifton range meets International Standards BS EN 61010-1, Safety requirements for electrical and electronic equipment for measurement, control and laboratory use.

Equipment used for heating additionally meets BS EN 61010-2-010 Particular requirements for laboratory equipment for the heating of materials.

Equipment used for mixing additionally meets BS EN 61010-2-051 Particular requirements for laboratory equipment for mixing and stirring.

Centrifuges meet requirements BS EN 61010-2-020 Particular requirements for laboratory centrifuges.

The Clifton range meets International Standards BS EN 61326-1 Electrical equipment for measurement, control and laboratory use - EMC Requirements both A and B classes.

Every piece of Clifton equipment has a unique serial number, recorded on our database with its manufacturing inspection data. Every item is electrically tested for safety, and a copy of test certificate enclosed in the instruction book.

Temperature performance

We pride ourselves on assuring that Clifton range performs to the highest level. All Clifton temperature controlled equipment undergoes temperature calibration, in controlled conditions, to thoroughly test its performance before release to you.

Analogue controlled equipment is checked at one temperature over its working range against a UKAS calibrated reference device. We adjust the equipment to reference temperature.

Digital controlled equipment is checked at one or two temperatures over its range against a UKAS calibrated reference device measuring actual and indicated temperatures. A sophisticated system then automatically enters any necessary temperature adjustments and only then is equipment released from the factory.

Quality System

Our products are designed, developed and manufactured in a tightly controlled ISO9001:2008 environment and all products are CE compliant.

Future Development

We have a policy of ongoing product development to ensure that tomorrow's laboratory is equipped with innovative, well-designed and reliable equipment.
