Filter papers

Raw materials and manufacture

For production of the high quality MN filter papers we use cotton linters, refined pulp with a high level of α -cellulose as well as glass fibres. Cotton linters are short-fibred seed hairs from cotton seeds, which cannot be used for textile purposes, but which are highly suitable for the manufacture of soft and absorbent filter papers.

In addition to cotton linters we use mainly pulp, which is obtained by chemical treatment of plant materials, e.g. coniferous or deciduous wood.

At MACHEREY-NAGEL only the most experienced paper specialists select the raw materials in order to ensure the continuously high quality of our filter papers.

For the manufacturing of MN glass fibre filters we use staple fibres made from borosilicate glass (exception: paper from quartz fibres). With a diameter of 0.5 – 1.5 μm these glass fibres are considerably thinner than cellulose fibres. One of the most important feature of glass fibre filters is their resistance to almost all chemicals (exception e.g. hydrogen fluoride).

Important technical parameters of filter papers

| Parameter | Description |
|--------------------------------------|---|
| Ash content/ residue on ignition | The ash content is determined in accordance with DIN 54370: 10 g filter paper are weighed after ignition in a platinum crucible at 800 °C. Results are expressed as % of original paper weight. |
| Dry bursting strength | For determination of the dry bursting strength the paper is clamped over a rubber diaphragm with an area of 10 cm^2 . The strain on the paper is then increased by applying an increasing air pressure, until the paper bursts. The dry bursting strength in accordance with DIN 53113 is stated in KPa. |
| Tensile strength | For determination of the tensile strength a paper strip (measuring 180 x 15 mm) is subjected to vertical strain by applying increasing weight. The force expended at the moment of tearing represents the tensile strength. Results are expressed in N/15 mm. |
| Thickness | The thickness of a paper is measured with a touch pressure device. Especially for soft and creped papers it is important that the touch pressure is not too high. Otherwise the papers are compressed and a falsely low thickness is obtained. |
| Filtration speed | For determination of the filtration speed in accordance with DIN 53137 the duration of flow of 10 ml distilled water through a quadrant-folded, freely suspended filter circle of 12.5 cm diameter is measured. Results are expressed in seconds. |
| Basis weight | The basis weight is determined for a sample of 10 x 10 cm. It is measured in g/ m^2 . |
| Gurley test | The Gurley test measures the time required for filtration of 100 ml air at a water column pressure of 31 mm. The sample has an area of 1/4 sq. inch. |
| Wet strength | The wet strength of a paper is a measure for the mechanical stability of a paper in a wet or moist condition. For example, it can be determined as the tensile strength or the bursting strength (see above). |
| Pore size | The retention efficiency of a filter paper is influenced by several factors. Since filter papers are deep-bed filters, one usually refers to a mean particle retention. |
| Capillary rise according to Klemm | The capillary rise according to Klemm indicates how far a strip of filter paper is moistened in 10 min when vertically dipped with one end into distilled water (20 °C). |
| Particle retention | Particle retention refers to the efficiency of filter papers in retaining certain precipitates. It is characterised by the permeability of the paper for precipitates of iron(III) oxyhydrate, lead sulphate, calcium oxalate and barium sulphate. |

Selection of filter papers

Important filtration properties for certain applications

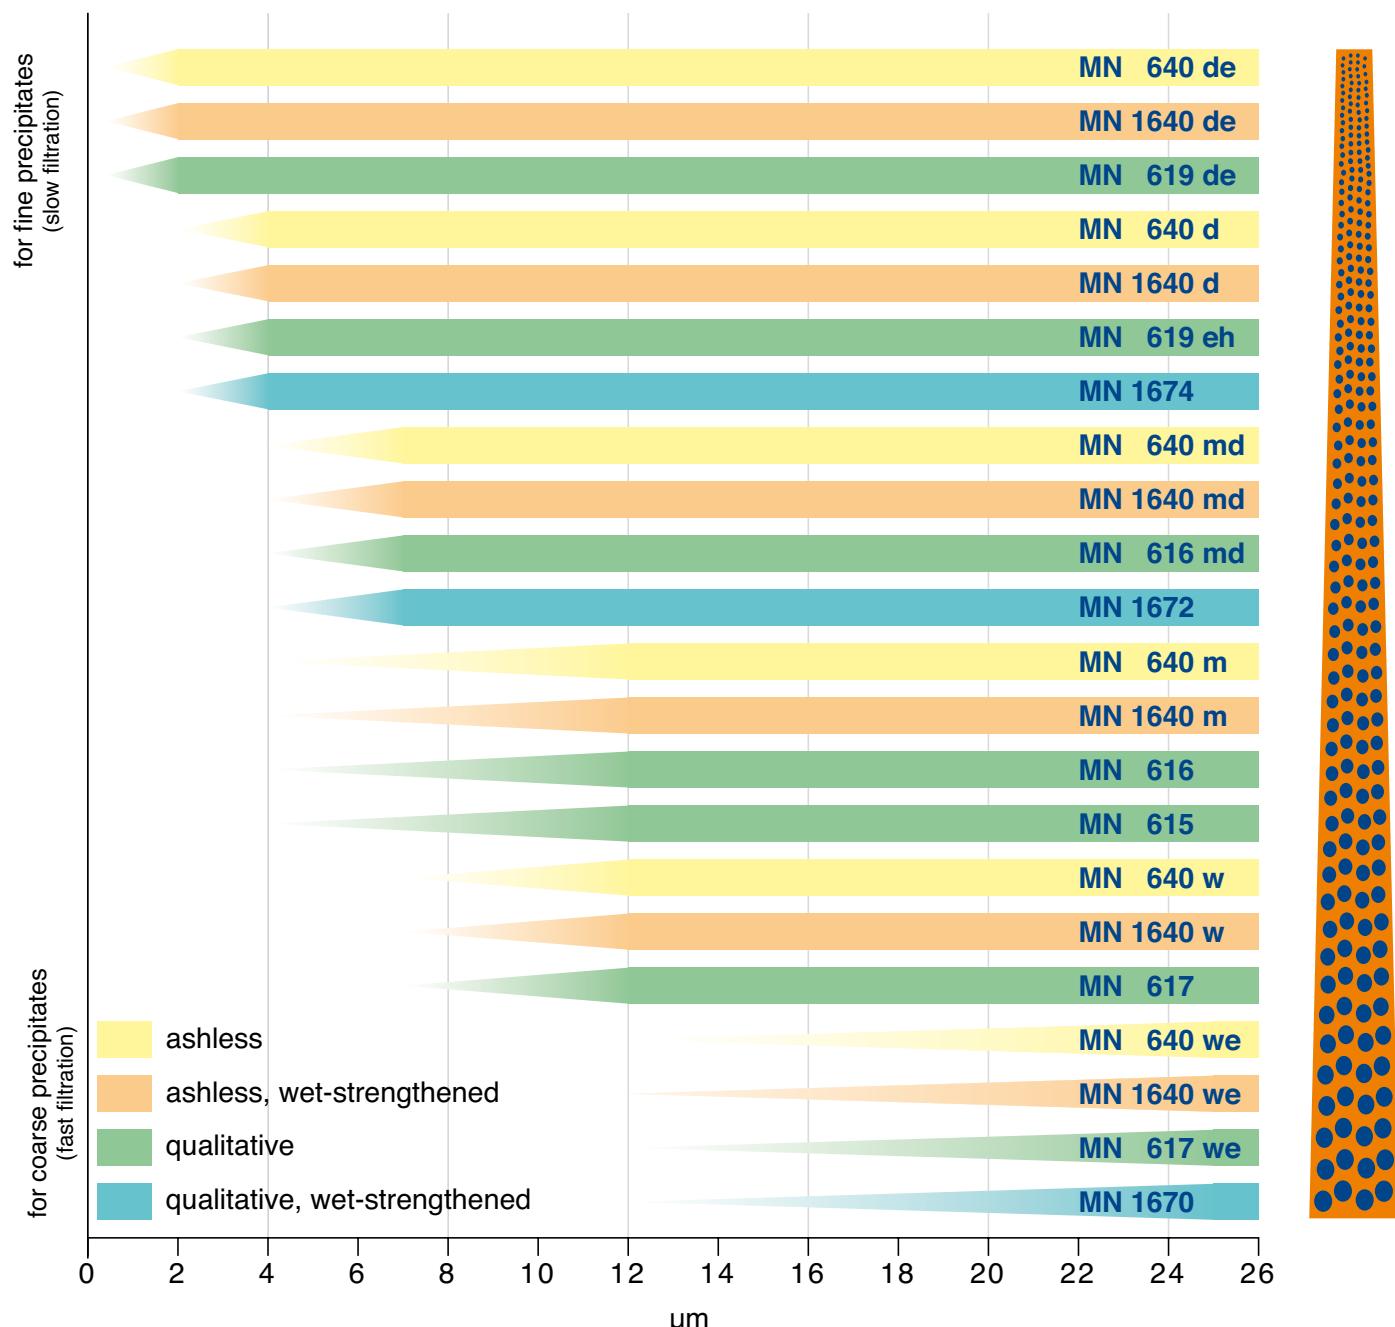

| Application | Recommended filter |
|--|--|
| filter cake ignition and quantitative determination of the residue (gravimetric analysis) | ashless filter papers |
| analysis of the filtrate; it is important that no interfering substances are extracted from the filter paper | ashless filter papers or glass fibre filters |
| mechanical removal of the filter cake from the filter, e.g. with a jet from a wash bottle or with a spatula. | wet-strengthened filters, (hardened filter papers) |
| separation of an organic solvent from water | hydrophobic filters (MN 616 WA, MN 617 WA) |
| visualisation of small amounts of light precipitates | black filter paper (MN 220) |
| technical filtration or need for large cuts | technical filter papers or thick filter papers |
| retention of very fine precipitates | slow filter papers |
| retention of coarse precipitates and fast filtration | fast filter papers |
| filtration of strongly acidic or strongly basic liquids | glass fibre filters |
| filtration of aggressive liquids (e.g. strong oxidants) | glass fibre filters |
| need for very low metal ion blanks of the filter (e.g. for investigation of air-borne particles) | quartz fibre filters |
| accelerated filtration with constant retention efficiency | creped paper |
| filtration at increased pressure or strong mechanical load (e.g. heavy filter cake). | thick technical filter papers |
| strongly absorbent paper, no special wet strength required | chromatography papers |

Please also note the list of applications on page 42.

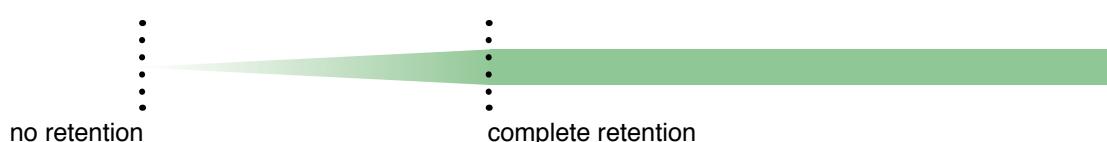

The screenshot shows two side-by-side search results pages from the MACHEREY-NAGEL website. Both pages feature the company logo at the top left and a navigation bar with links like 'Home', 'Products', 'Services', 'Data Sheets', and 'Downloads'. The left page is titled 'PP Filtration' and lists categories such as 'Macherey-Nagel', 'Whatman', 'Schleicher & Schuell', 'Sartorius', and 'VWR'. The right page is titled 'FilterFinder' and includes a search form with fields for 'Search term', 'Manufacturer' (with options for 'Macherey-Nagel', 'Whatman', 'Schleicher & Schuell', 'Sartorius', and 'VWR'), 'Type' (radio buttons for 'Filterpaper' and 'Syringe Filter'), 'Cat No.', 'Grid', and 'Search'. Below the search form, there's a note about finding the best quality filter paper from Macherey-Nagel, followed by a table of results with columns for 'Cat No.', 'Product Name', 'Description', 'Manufacturer', and 'Grid'.

Particle retention of MN filter papers

The particle retention capacity is an important parameter for characterising a filter paper. The following diagram shows typical values of our analytical filter papers.

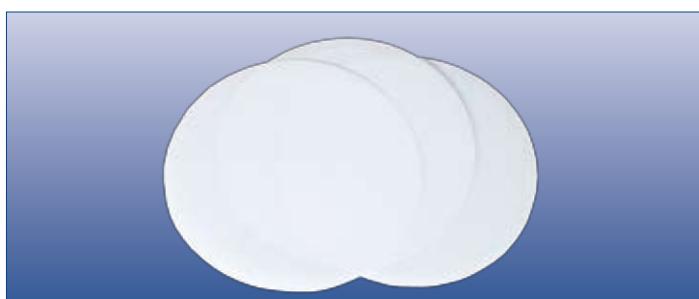

How to read the graph

Filter papers for quantitative analysis

Ashless filter papers

Ashless filter papers are particularly suited for quantitative routine analysis and are manufactured from refined pulp and linters. They are acid-washed and have an extremely low ash content of < 0.01%. The amount of α -cellulose is about 95%.

Hardened filter papers for quantitative analysis

These wet-strengthened hard filter papers are manufactured from refined pulp and linters and have a low ash content of < 0.01%. They are often used for quantitative routine procedures and for analytical gravimetric applications. Due to their high mechanical strength in wet condition they are particularly suited for applications, where the residue is removed from the filter e.g. with a spatula or a jet of water.

Filter papers for qualitative analysis

Standard filter papers for qualitative analysis

Qualitative filter papers are manufactured from the same raw materials as the ashless grades and are particularly suited for general laboratory filtrations. The average ash content is about 0.1%, the amount of α-cellulose is about 95%.

Wet-strengthened filter papers for qualitative applications

Hardened analytical filter papers are manufactured from refined pulp and linters and feature a content of α -cellulose of more than 95%. The smooth surface of these papers allows fibre-free filtration. They feature a high wet strength and can also be used in the filtration of strongly alkaline or strongly acidic solutions. Due to their high mechanical strength in wet condition they are particularly suited for applications, where the residue is removed from the filter e.g. with a spatula or a jet of water.

Glass fibre filters / quartz fibre filters

Glass fibre filters allow a fast filtration and simultaneously a very high particle retention. They are manufactured from borosilicate glass fibres and are chemically resistant towards most organic and inorganic solvents (except HF). For the analysis of air-borne particles we recommend the quartz fibre filters MN QF-10 which feature an extremely low content of metal traces.

Filter papers for technical applications

The filter papers listed below are mainly recommended for technical applications such as industrial filtrations. They are available as sheets, filter circles, folded filters (in part), cuts of almost any shape and as rolls. On request, we will be glad to produce other filter papers or filter papers with special properties as to customers demand.

Smooth and thick filter papers

Technical data

| Grade | Application and properties | Thickness | Filtration speed | Basis weight |
|----------|---|-----------|------------------|----------------------|
| MN 713 | medium speed, for general laboratory use | 0.15 mm | 20 s | 70 g/m ² |
| MN 615 A | medium speed, for general applications, slightly stronger than MN 615 | 0.20 mm | 20 s | 80 g/m ² |
| MN 672 | medium speed, very high wet strength, e.g. for sugar industry | 0.20 mm | 37 s | 85 g/m ² |
| MN 674 | slow, very high wet-strength | 0.19 mm | 90 s | 85 g/m ² |
| MN 52 K | polyester paper with very high mechanical strength, also when wet (moist) | — | — | 100 g/m ² |
| MN 875 | medium speed, e.g. for beverage industry | 0.26 mm | 25 s | 120 g/m ² |
| MN 918 | fast, for filtration of large volumes of liquid | 0.34 mm | 9 s | 120 g/m ² |
| MN 625 | medium speed, for general applications | 0.26 mm | 30 s | 130 g/m ² |
| MN 804 | very fast, soft, e.g. beverage industry | 0.40 mm | 5 s | 140 g/m ² |
| MN 621 | medium speed, wet-strengthened, e.g. for soil analysis | 0.27 mm | 40 s | 130 g/m ² |
| MN 728 | slow, with about 30% activated charcoal for decolouring coloured liquids, e.g. for electroplating baths | 0.40 mm | 55 s | 170 g/m ² |
| MN 818 | fast, strongly absorbent, e.g. for collection of blood drops (Guthrie test) | 0.45 mm | 8 s | 180 g/m ² |
| MN 960 | fast, e.g. for beverage industry | 0.45 mm | 14 s | 180 g/m ² |
| MN 180 | medium wet strength, hard, for technical filtrations | 0.35 mm | 45 s | 180 g/m ² |
| MN 675 | slow, firm, for filtration of large volumes of liquid | 0.35 mm | 60 s | 180 g/m ² |
| MN 604 | fast, thick, e.g. for beverage industry | 0.40 mm | 9 s | 200 g/m ² |
| MN 827 | strongly absorbent, soft | 0.70 mm | 12 s | 270 g/m ² |
| MN 835 | similar to MN 827, but wet-strengthened, e.g. for electroplating baths | 0.70 mm | 12 s | 270 g/m ² |
| MN 270 | very high wet-strength, hard, for technical filtrations | 0.54 mm | 50 s | 270 g/m ² |
| MN 440 | soft thick filter paper, e.g. for electroplating baths | 1.0 mm | — | 400 g/m ² |
| MN 520 | soft thick filter paper, e.g. for electroplating baths | 1.5 mm | — | 500 g/m ² |
| MN 866 | soft thick filter paper, e.g. for electroplating baths | 1.7 mm | — | 650 g/m ² |

Fat analysis

MN 615 ff: This paper is particularly suited for the analysis of fats. A special treatment with organic solvents guarantees that these filters are practically free of fats and resins (ether-soluble residue < 0.1 mg for a 27 cm filter circle).

MN 715: This paper is also suited for the analysis of fats. Careful selection of the raw materials ensures a low ether-soluble residue for these filters.

Technical data

Weighing aids

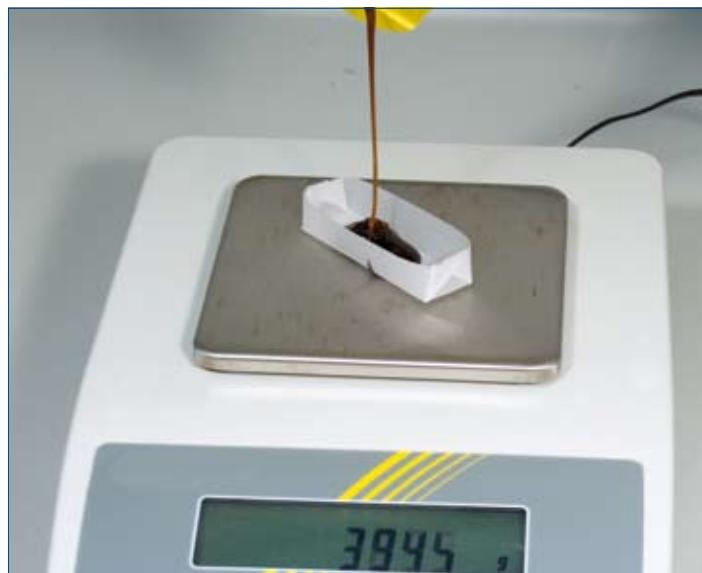

Weighing boats MN 808: Weighing boats MN 808 are made from a special, nitrogen-free parchment. They are used to weigh viscous or syrupy substances.

Weighing paper MN 226: This is a transparent paper, smooth on both sides, which can be used as substitute for weighing boats. The smooth surface of the paper guarantees that the weighed goods can be transferred without loss.

Parchment sheets MN 40/25: These easily crushable (not wet-strengthened) parchment papers are mainly used in the sugar industry for weighing syrup and semi-crystalline substances.

Antibiotic resistance testing

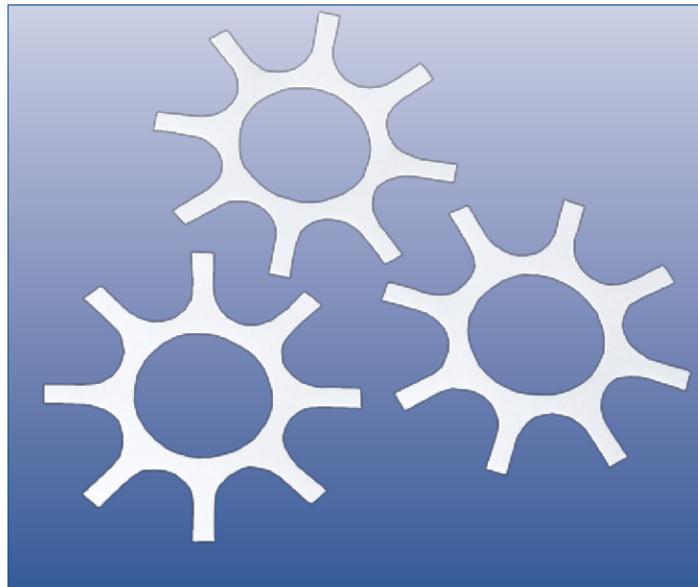

These products are used in testing the resistance of pathogens to antibiotics. For this test the filter paper sections can be impregnated with the antibiotic to be tested and placed on the inoculated nutrient medium. Depending on the effectiveness, a smaller or larger zone of inhibition is formed. MACHEREY-NAGEL only supplies non-impregnated filter paper sections!

Ion exchange papers

MN 616 LSA-50: Filter paper with strongly acidic cation exchange resin; matrix polystyrene crosslinked with 8.5% DVB; active groups SO₃H, strongly acidic, supplied in H⁺ form; capacity 2.0 mval/g, applicable up to 100 °C.

A folded filter of 15 cm diameter is sufficient to demineralize 100 ml of water with a hardness of 10° d.

MN 616 LSB-50: Filter paper with strongly basic anion exchange resin; matrix polystyrene crosslinked with 6% DBV; active groups quaternary ammonium compounds, strongly basic; supplied in OH⁻ form; capacity 1.3 mval/g, applicable up to 70 °C.

Filter aids

Filter flocs

Filter aids transform difficult precipitates and colloidal particles into a form which can be filtered more easily. When slimy and strongly lyophilic, swelling precipitates are involved, the fibres of the filter flocs prevent formation of a continuous, impermeable layer on the filter. The resulting filter cake remains porous and permeable, and clogging of the filter is prevented.

Blotting procedures and chromatography

Blotting papers

The smooth surface of these papers ensures a uniform, high absorptivity. They are particularly recommended for blotting procedures.

Chromatography papers

Paper chromatography requires high quality papers, since they have a considerable impact on the results of a separation.

The chromatography papers listed below are almost exclusively produced from pure linters without addition of other substances. For this reason they show a low wet strength.

Extraction thimbles

Extraction thimbles are often used for holding solid materials, from which certain substances are to be eluted (extracted) with a suitable solvent. Additionally, extraction thimbles are used in the fields of air and waste gas analysis for collecting solid particles (dust).

Extraction thimbles made from cellulose

Technical data

| Grade | Properties |
|----------|---|
| MN 645 | standard grade, extraction thimbles made from pure cellulose |
| MN 645 D | extraction thimbles MN 645 with lid to prevent loss of contents |
| MN 645 F | extraction thimbles made from cellulose, denser than MN 645 |
| MN 645 W | extraction thimbles made from cellulose, more permeable than MN 645 |
| MN 645 R | extraction thimbles MN 645 with sealing collar and two finger recesses on opposite sides of the collar, for dust analysis in industrial gases, exhaust gases and room air |

PORAFIL® membrane filters

Cellulose mixed ester membranes · PORAFIL® CM

Membranes of cellulose mixed esters are ideal for gravimetric analysis. They are particularly suited for aqueous solutions. The hydrophilic membrane is thermally stable to 125 °C and can be autoclaved at 121 °C. This membrane is often used for contamination tests.

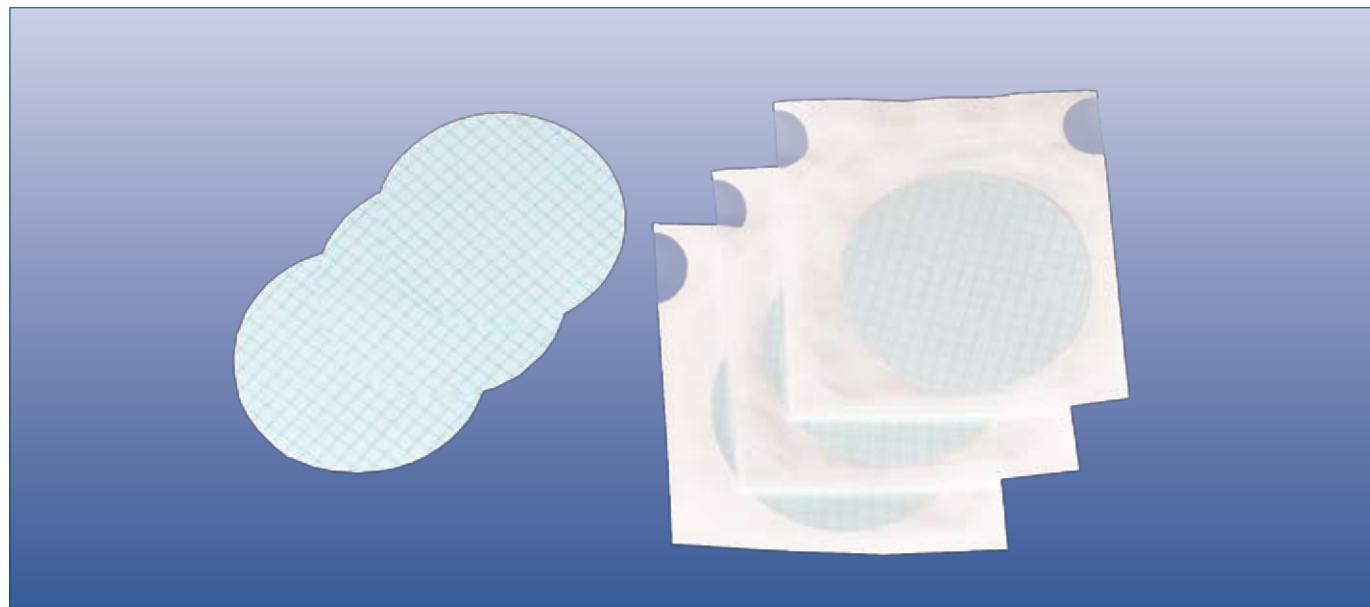

Ordering information

Cellulose mixed ester membranes, fabric-reinforced · PORAFIL® MV

These cellulose mixed ester membranes are reinforced with a polyester fabric. Their filtration properties are very similar to membranes PORAFIL® CM, however, they are mechanically much more stable.

Cellulose acetate membranes · PORAFIL® CA

These membranes of cellulose acetate have a low protein binding capacity and are suited for aqueous and alcoholic media. The membranes are hydrophilic and can be used for hot gases up to 180 °C. They can be sterilised.

Nitrocellulose membranes · PORAFIL® NC

PORAFIL® NC membranes are made from cellulose nitrate. They are easily wettable and suited for filtration of aqueous solutions. In dry atmosphere these membranes are thermally stable to 125 °C and can be autoclaved at 121 °C.

Polytetrafluoroethylene membranes · PORAFIL® TE

Membranes of polytetrafluoroethylene (PTFE) are particularly suited for aggressive media, since they are chemically inert towards aqueous and organic solutions as well as towards concentrated acids and bases. These membranes are hydrophobic, thus the pressure for filtration of aqueous solutions has to be higher than the breakthrough pressure. PORAFIL® TE membranes can be used at temperatures up to 145 °C.

Regenerated cellulose membranes · PORAFIL® RC

Membranes of regenerated cellulose are resistant towards most organic solvents. They are e.g. used for filtration of solvent mixtures and ultrapurification and degassing of HPLC eluents.

CHROMAFIL® syringe filters

Disposable syringe filters CHROMAFIL® are ready-to-use filtration units, which are filter elements incorporated in a polypropylene housing. Because every filter is only used once, contaminations are avoided.

CHROMAFIL® PET

- hydrophilic multipurpose membrane
- for polar as well as nonpolar solvents
- the HPLC filter, especially suited for mixtures of water and organic solvents
- for TOC/DOC determination, not cytotoxic, does not inhibit the growth of microorganisms and higher cells
- polyester filter with integrated glass fibre prefilter (GF/PET): recommended for solutions with a high load of particulate matter or for highly viscous solutions

CHROMAFIL® PTFE

- hydrophobic membrane
- for nonpolar liquids and gases
- very resistant towards all kinds of solvents as well as acids and bases flushing with alcohol, followed by water, makes the originally hydrophobic membrane more hydrophilic

CHROMAFIL® CA

- hydrophilic membrane
- for filtration of water-soluble oligomers and polymers, especially suited for biological macromolecules
- very high shape stability in aqueous solutions
- extremely low binding capacity for proteins (21 µg/filter)
- also available in a sterile package (S) for filtration under sterile conditions (each filter individually sealed)

CHROMAFIL® PES

- hydrophilic membrane
- for aqueous and slightly organic liquids with higher flow rates
- very low adsorption for pharmaceuticals and proteins
- good stability against acids and bases
- for sterile filtration of non-sterile solutions we recommend the CHROMAFIL® Sterilizer PES (each filter individually sealed)
- binding capacity for proteins 29 µg/filter

CHROMAFIL® PVDF

- hydrophilic membrane
- for polar and nonpolar solutions, water-soluble oligomers and polymers like proteins
- binding capacity for proteins 82 µg/filter
- the PVDF filter with integrated glass fibre prefilter is recommended for filtration of biological samples with high particle loads. This filter features a high binding capacity for proteins.
- also suited for filtration of polar and nonpolar solutions

CHROMAFIL® GF

- inert filter, nominal pore size 1 µm, allows higher flow rates than small pore filters
- for solutions with high loads of particulate matter or for highly viscous solutions (e.g. soil samples, fermentation broths)
- as prefilters for other CHROMAFIL® filters, they prevent plugging of the membrane

pH indicator papers

qualitative analysis semi-quantitative analysis

pH indicator papers**pH-Fix**

pH-Fix test strips are the highly appreciate standard in many laboratories. The easy dip&read procedure provides reliable results in seconds. Due to the patented pH-Fix technology the indicator is chemically bound to the test pad. The dye does not wash out so clothes stay clean and samples remain pure.

pH indicator papers

qualitative analysis

semi-quantitative analysis

Universal and special indicator papers

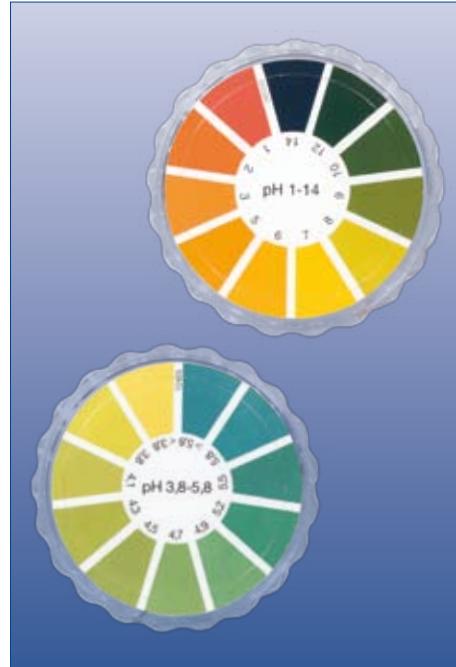

pH indicator papers have been on the market for decades and are the appreciated standard for many applications. For each pH value these papers show a single colour which can be matched with the colour scale at intervals of 0.2 – 1 pH unit.

Test papers for qualitative analysis

Test papers allow the qualitative determination of ions and chemical compounds. They are used to detect if compounds tested for are present above the specific detection limit. Some of the papers have specific applications.

Ordering information

| Determination of | Test paper / Test strips | Presentation | REF |
|---|--|---|----------------------------|

QUANTOFIX® test strips for semi-quantitative determinations

QUANTOFIX® test strips can be used for a large variety of different substances. In most cases an easy dip&read procedure provides reliable results in 10 – 120 seconds. As labs in a pocket QUANTOFIX® test strips are easy to use for professional analysts as well as chemical laymen.

Container with 100 test strips 6 x 95 mm

¹⁾ The tests are supplied complete with all reagents required for the determination

²⁾ Container with 60 test strips

³⁾ Container with 25 test strips

CE: CE-marked according to the European directive for medical devices 93/42/EGW

| Large volumens of liquid, technical filtration | MN 675 | 14 |
| Leather industry, filtration of resins | MN 615 1/4, MN 651 1/4 | 10, 15 |
| Light precipitates, detection of small amounts | black filter paper MN 220 | 19 |
| Lime fertilizer, clarification of aqueous solutions | MN 619 G 1/4 | 17 |

| Application | Recommended MN product | Page |
|--|--|---------|
| Lining of small animals' stables, cages etc | LAB-TOP PE-coated paper MN 210 PE | 22 |
| Liquids, clarification | glass fibre filters MN GF-2 | 12 |
| M | | |
| Malt analysis | MN 321, MN 614 | 10 |
| Margarine, water distribution analysis | MN 619 de | 10 |
| Metallographic sections, protective paper | lens tissue paper MN 13 | 21 |
| Micro-nutrient analysis in soil | MN 280 | 17 |
| Microscopic preparations, absorption of liquid | blocks MN 224 | 20 |
| Milk serum, clarification | kieselguhr paper MN 660 | 19 |
| Mouldings for Y-ray fluorescence analysis | cellulose tablets MN 2104 | 16 |
| N | | |
| Nitrogen fertilizers, clarification of aqueous solutions | MN 619 G | 17 |
| Nucleic acid solutions, clarification | glass fibre filters MN GF-5 | 12 |
| Nutrient media | MN 605, MN 606 | 15 |
| O | | |
| Oils | MN 605, MN 606 | 15 |
| Optical glasses, cleaning | lens tissue paper MN 13 | 21 |
| Organic drug and plant extracts, phase separation filtration | MN 616 WA, MN 617 WA | 19 |
| P | | |
| Paper analysis | MN 640 m | 8 |
| Paper chromatography | MN 214, MN 218, MN 260, MN 261, MN 827, MN 866 | 23 |
| Paraffin content in bitumen | MN 615 | 10 |
| Particle analysis | membrane filters PORAFILE® CM | 28 |
| Particulate matter, removal | CHROMAFIL® syringe filters | 32–35 |
| PORAFILE® membrane filters | | 28–31 |
| Perfume industry | smelling strips MN 270 S | |
| Pets' cages, lining | LAB-TOP PE-coated paper MN 210 PE | 22 |
| pH measurement | pH indicator papers | 36–37 |
| Phages, larger viruses (concentration) | membrane filters PORAFILE® CA | 29 |
| Pharmacies, covering of tables, cupboards etc. | MN 713 | 14 |
| Phase separation between aqueous and organic phase | MN 616 WA, MN 617 WA | 19 |
| Phosphorous analysis, phosphate-free filters | MN 617 G, MN 616 G, MN 619 G | 17 |
| Photoemulsions | MN 601 | 15 |
| Plankton examination, optical purity control | membrane filters PORAFILE® CM | 28 |
| Plant extracts from aqueous solutions, phase separation filtration | MN 616 WA, MN 617 WA | 19 |
| Porous filter stone protection | MN 621 | 14 |
| Potash fertilizers, clarification of aqueous solutions | MN 616 1/4, MN 619 G 1/4 | 17 |
| Pre-filters for membrane filters | glass fibre filters MN GF-2, MN GF-4 | 12 |
| Pressure filtration | MN 1640 w, MN 1640 m, MN 1640 md, MN 1640 d, MN 1640 de MN 1670, MN 1672, MN 1674 | 9 11 |
| Process water, removal of suspended particles | glass fibre filters MN GF-3, MN 85/90 | 12 |
| Protection of sensitive surfaces, lab benches | LAB-TOP PE-coated paper MN 210 PE | 22 |
| Protein filtration from aqueous and organic solutions | glass fibre filters MN GF-1, MN GF-5 | 12 |

| Application | Recommended MN product | Page |

| Yeast and mould fungi, collection | PORAFL® membrane filters | 28 |
| Yeast detection | membrane filters PORAFL® CM | 28 |

List of filter paper grades

| Grade | Description | Page |
|---------------|--|------------|
| MN 1 | technical filter paper | on request |
| MN 11 | cellu-cotton wadding, unbleached | on request |
| MN 13 | lens tissue paper (José paper) | 21 |
| MN 40/25 | parchment sheets, crushable | 20 |
| MN 52 K | polyester paper | 17 |
| MN 59 | electrocardiograph contact paper | on request |
| MN 68 | sterilizing paper | on request |
| MN 85/70 | glass fibre filters | 12 |
| MN 85/70 BF | glass fibre filters without binder | 13 |
| MN 85/90 | glass fibre filters | 13 |
| MN 85/90 BF | glass fibre filters without binder | 13 |
| MN 85/220 | glass fibre filters | 13 |
| MN 85/220 BF | glass fibre filters without binder | 13 |
| MN 101 | cellulose filter flocs | 22 |
| MN 112 | glass fibre wadding | on request |
| MN 126/70 | technical filter paper, creped | 15 |
| MN 180 | thick filter paper | 14 |
| MN 210 PE | PE-coated filter paper LAB-TOP | 22 |
| MN 214 | chromatography paper | 23 |
| MN 214 ff | chromatography paper | 23 |
| MN 218 | chromatography paper | 23 |
| MN 218 B | blotting paper | 23 |
| MN 220 | black filter paper | 19 |
| MN 224 | adsorbent paper for microscopy | 20 |
| MN 226 | weighing paper | 20 |
| MN 260 | chromatography paper | 23 |
| MN 261 | chromatography paper | 23 |
| MN 270 | thick filter paper | 14 |
| MN 270 S | smelling strips | on request |
| MN 280 | filter paper for soil analysis | 17 |
| MN 321 | nitrogen-free filter paper | 18 |
| MN 440 | thick filter paper | 14 |
| MN 440 B | blotting paper | 23 |
| MN 514 | qualitative and technical filter paper, embossed | on request |
| MN 520 | thick filter paper | 14 |
| MN 553 | technical filter paper, creped | 15 |
| MN 601 | technical filter paper, creped | 15 |
| MN 604 | technical filter paper | 14 |
| MN 605 | technical filter paper, creped | 15 |
| MN 606 | technical filter paper, creped | 15 |
| MN 612 | technical filter paper, embossed | 15 |
| MN 614 | qualitative and technical filter paper, embossed | 15, 18 |
| MN 615 | qualitative filter paper | 10 |
| MN 615 A | technical filter paper | 14 |
| MN 615 ff | fat-free filter paper | 18 |
| MN 616 | qualitative filter paper | 10 |
| MN 616 G | phosphate-free filter paper | 17 |
| MN 616 LSA-50 | cation exchange paper | 21 |

| Grade | Description | Page |
|---------------|---|------------|
| MN 616 LSB-50 | anion exchange paper | 21 |
| MN 616 md | qualitative filter paper | 10 |
| MN 616 WA | water impermeable (hydrophobic) filter paper | 19 |
| MN 617 | qualitative filter paper | 10 |
| MN 617 G | phosphate free filter paper | 17 |
| MN 617 WA | water impermeable (hydrophobic) filter paper | 19 |
| MN 617 we | qualitative filter paper | 10 |
| MN 618 | qualitative filter paper | 10 |
| MN 619 | qualitative and technical filter paper | 10 |
| MN 619 de | qualitative filter paper | 10 |
| MN 619 eh | qualitative filter paper | 10 |
| MN 619 G | phosphate-free filter paper | 17 |
| MN 620 | technical filter paper, embossed | 18 |
| MN 621 | technical filter paper | 14 |
| MN 625 | technical filter paper | 14 |
| MN 631 | technical filter paper, embossed | 15 |
| MN 640 d | ashless filter paper | 8 |
| MN 640 dd | ashless filter paper | 8 |
| MN 640 de | ashless filter paper | 8 |
| MN 640 m | ashless filter paper | 8 |
| MN 640 md | ashless filter paper | 8 |
| MN 640 mS | filter paper cuts for Schöniger method | 16 |
| MN 640 we | ashless filter paper | 8 |
| MN 645 | cellulose extraction thimbles | 24 |
| MN 645 D | cellulose extraction thimbles | 24 |
| MN 645 F | cellulose extraction thimbles | 24 |
| MN 645 R | cellulose extraction thimbles | 24 |
| MN 645 W | cellulose extraction thimbles | 24 |
| MN 646 | cellulose filter thimbles for Liesgang-Glocke | on request |
| MN 649 | glass fibre extraction thimbles | 25 |
| MN 649 R | glass fibre filter thimbles | 25 |
| MN 651 | technical filter paper, creped | 15 |
| MN 651/120 | technical filter paper, creped | 15 |
| MN 652 | technical filter paper, creped | 15 |
| MN 660 | Kieselguhr-filter paper | 19 |
| MN 672 | technical filter paper, wet-strengthened | 14 |
| MN 674 | technical filter paper, wet-strengthened | 14 |
| MN 675 | technical filter paper | 14 |
| MN 692 | technical filter paper, creped | 15 |
| MN 704 | technical filter paper | on request |
| MN 713 | technical filter paper | 14 |
| MN 714 | technical filter paper | on request |
| MN 715 | fat-free filter paper | 18 |
| MN 728 | activated charcoal filter paper | 14, 16 |
| MN 750 N | technical filter paper, creped | 15 |
| MN 751 | technical filter paper, creped | 15 |
| MN 753 | technical filter paper, creped | 15 |
| MN 804 | technical filter paper | 14 |
| MN 807 | nitrogen-free filter paper | on request |
| MN 808 | weighing boats | 20 |

| Grade | Description | Page |
|-------------------|---|------------|
| MN 818 | thick filter paper | 14 |
| MN 818 GT | Guthrie test cards | on request |
| MN 827 | thick filter paper, also suited for chromatography | 14, 23 |
| MN 827 ATD | antibiotic test disks | 21 |
| MN 827 ATS | antibiotic test stars | 21 |
| MN 827 B | blotting paper | 23 |
| MN 835 | thick filter paper | 14 |
| MN 850 | technical filter paper, creped | 15 |
| MN 866 | thick filter paper, also suited for chromatography | 14, 23 |
| MN 875 | technical filter paper | 14 |
| MN 918 | technical filter paper | 14 |
| MN 960 | technical filter paper | 14 |
| MN 1640 d | ashless, wet-strengthened filter paper | 9 |
| MN 1640 de | ashless, wet-strengthened filter paper | 9 |
| MN 1640 m | ashless, wet-strengthened filter paper | 9 |
| MN 1640 md | ashless, wet-strengthened filter paper | 9 |
| MN 1640 w | ashless, wet-strengthened filter paper | 9 |
| MN 1640 we | ashless, wet-strengthened filter paper | 9 |
| MN 1670 | qualitative wet-strengthened filter paper | 11 |
| MN 1672 | qualitative wet-strengthened filter paper | 11 |
| MN 1674 | qualitative wet-strengthened filter paper | 11 |
| MN 1817 | flue gas test | on request |
| MN 2101 | ashless filter flocs | 22 |
| MN 2104 | cellulose tablets for x-ray fluorescence analysis | 16 |
| MN GF-1 | glass fibre filters | 12 |
| MN GF-2 | glass fibre filters | 12 |
| MN GF-3 | glass fibre filters | 12 |
| MN GF-4 | glass fibre filters | 12 |
| MN GF-5 | glass fibre filters | 12 |
| MN GF-6 | glass fibre filters | 12 |
| MN QF-10 | quartz fibre filters | 13 |
| CHROMABOND® | filter plates for filtration in 96-well microtiter plate format | 31 |
| CHROMAFIL® CA | syringe filters (cellulose acetate, sterile / not sterile) | 35 |
| CHROMAFIL® GF | syringe filters (glass fibre) | 35 |
| CHROMAFIL® GF/PET | syringe filters (polyester with glass fibre pre-filter) | 35 |
| CHROMAFIL® MV | syringe filters (cellulose mixed esters) | 33 |
| CHROMAFIL® PA | syringe filters (polyamide) | 35 |
| CHROMAFIL® PES | syringe filters (polyethersulfone) | 34 |
| CHROMAFIL® PET | syringe filters (polyester) | 32 |
| CHROMAFIL® PTFE | syringe filters (polytetrafluoroethylene) | 33 |
| CHROMAFIL® PVDF | syringe filters (polyvinylidene difluoride) | 35 |
| CHROMAFIL® RC | syringe filters (regenerated cellulose) | 32 |
| PORAFIL® CA | membrane filters made from cellulose acetate | 29 |
| PORAFIL® CM | membrane filters made from cellulose mixed esters (sterile / not sterile) | 28 |
| PORAFIL® MV | membrane filters made from cellulose mixed esters, reinforced with polyester fabric | 28 |
| PORAFIL® NC | membrane filters made from nitrocellulose (cellulose nitrate) | 29 |
| PORAFIL® PC | membrane filters made from polycarbonate | 30 |
| PORAFIL® PE | membrane filters made from polyester | 30 |
| PORAFIL® RC | membrane filters made from regenerated cellulose | 30 |
| PORAFIL® TE | membrane filters made from polytetrafluoroethylene | 29 |

MACHEREY-NAGEL

Your competent partner in analytical chemistry

Tradition and Modernity – over 90 years experience

- Worldwide operating German company (founded 1911)
- Subsidiaries in France, Switzerland and USA
- Distributors in over 150 countries
- Long-standing tradition in filter papers
- Development, production and sales of special products for water, environmental and food analysis, for biotechnology, chemical and pharmaceutical industry and medical diagnostics

Quality and Diversity – 5 product ranges with over 25 000 products „Made in Germany“

Filtration

- Filter Papers
- Filter Membranes
- Extraction Thimbles

Rapid Tests

- Test Papers and Test Strips
- Urine Test Strips

Water Analysis

- Colorimetric and Titrimetric Test Kits
- Photometric Water Analysis
- Mikrobiology

Chromatography

- High Performance Liquid Chromatography (HPLC)
- Gas Chromatography (GC)
- Thin Layer Chromatography (TLC)
- Sample Preparation (SPE)

Bioanalysis

- Nucleic Acid Purification Kits
- Protein Purification Kits
- Transfer Membranes

Competence & Service – friendly employees with the know-how you need

- Expert support by our customer service center
- Product-specific quality certificates and Material Safety Data sheets easily available
- Realization of unique special products and OEM solutions
- Smooth logistics and short delivery times you can trust
- MN in-house design department can assist with specific marketing needs
